

## Ledbury Road W11

Calibre have successfully completed an outstanding HVAC installation in a stunning penthouse apartment, situated above a 17th century church adorned with gothic stonework.

We designed and installed multiple mini-VRF systems to comply with the rigorous external planning conditions, and internal fan coils supplying air to the habitable rooms through concealed grilles in the coffered ceilings.

Other highlights of the project were provision of full user control via the Daikin Cloud App, and concealed extract ventilation to bathrooms.

The ductwork design was challenging as ceiling voids were minimal, and the whole installation had to operate with extremely low noise levels. ►

# Ledbury Road W11

► Calibre's expertise shone here as we were able to achieve all this and more, with the result that the system performs perfectly and the client is delighted – another demonstration of Calibre's professionalism in the luxury residential market.
