Flexible showering with behind the wall technology

Suitable for use with a combination boiler, subject to the manufacturers performance specifications

Only 1 bar pressure required for a fantastic shower

“Experience award-winning design with innovative energy saving, and a very special kind of water pleasure”

“My grandfather was a very special man. A visionary. A perfectionist. He was never satisfied with the status quo, but was always wanting to find better and more efficient solutions. Which is what we still aspire to today. To us, the perfect water experience is first and foremost a feeling. This feeling includes knowing that we are doing something that is good for the environment as well as for ourselves.

That is why we are constantly developing new technologies to further increase your water pleasure and reduce water consumption at the same time. That is how our ideas for water become innovations in your bathroom. Experience award-winning design with innovative energy saving, and a very special kind of water pleasure”.

Richard Grohe

INNOVATION BY DESIGN

Since 1901, bathroom pioneer Hans Grohe and his descendants have been one step ahead of their time. Whether this has been inventing the first hand shower (1928) or introducing a new shower era with Raindance (2003). Even more than 110 years after the company was founded, innovation is still the driving force as illustrated by "Select" technology.

Brilliantly simple, simply brilliant – Select technology

“tested, more than **250,000** cycles”

The simplicity and convenience of one touch operation has finally found a home in the bathroom. Alternate spray modes or outlets with a single click giving choice at the touch of a button.

Reliability is also built in with Select technology, tested, more than 250,000 cycles - one touch is guaranteed.

Powered by iBox universal

The iBox universal is the heart of any Hansgrohe concealed shower and sits quietly behind the wall. By choosing to have this installed, you are choosing to future proof your shower beyond your current style and layout.

ShowerSense

Hansgrohe Shower Systems 1

You can't beat the versatility of a hand shower for showering at different heights, washing hair or for cleaning the bath or shower tray. Each hand shower below has a variety of spray modes for even more showering enjoyment.

Operating pressure: min 1 bar/max 6 bar

WATER SYSTEMS

Gravity system

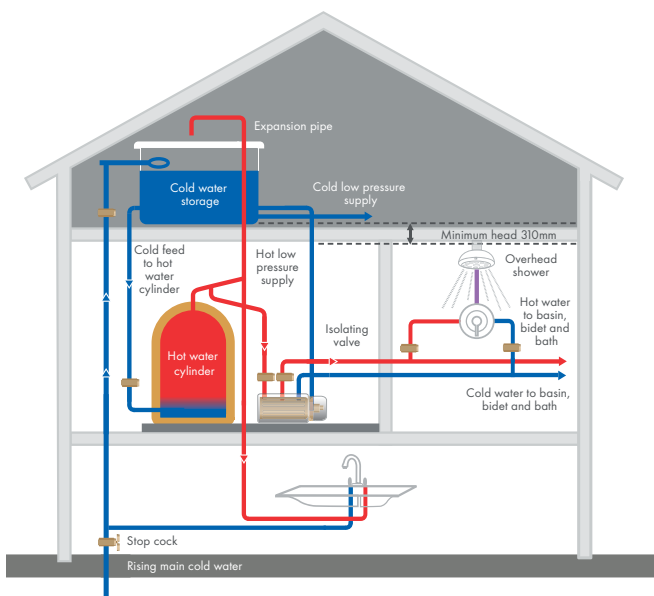

Is there a cold water storage tank in the loft and a hot water cylinder in the airing cupboard?

If your water system is 'Gravity Fed', you will typically find the cold water storage tank in the loft.

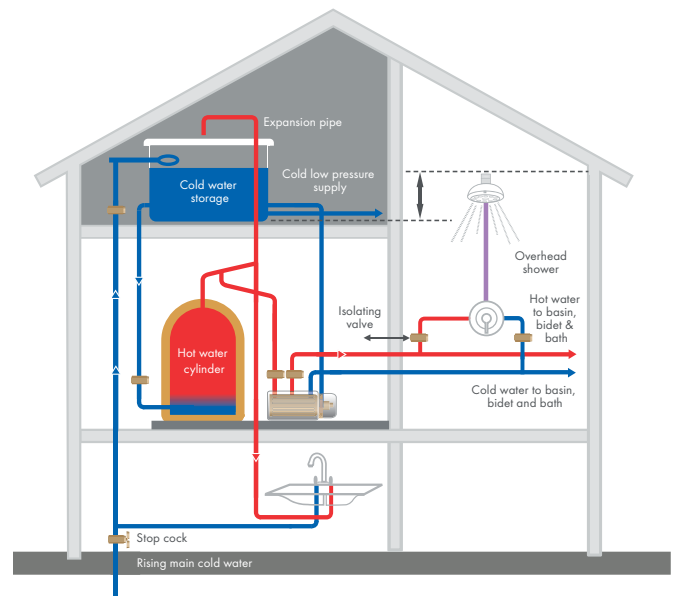

Gravity systems only provide low pressure and are often fitted with a pump to improve the pressure.

Each system within this brochure has a recommended pump for people using a gravity fed water system. Please see a selection of pumps on the next page.

Pumped gravity system

Positive head

Negative head

Hansgrohe Pumps by Stuart Turner

When you choose a Hansgrohe Pump by Stuart Turner, you are investing in a name you can trust to deliver quality, design innovation, value for money and peace of mind. Pumps are ideal for increasing water pressure in properties with a gravity fed water system in place.

Positive head

Standard 2.6 bar - 07002034 - £290.29 inc VAT

Standard 3.0 bar - 07002051 - £624.56 inc VAT

Standard 4.0 bar - 07002052 - £677.26 inc VAT

Negative head

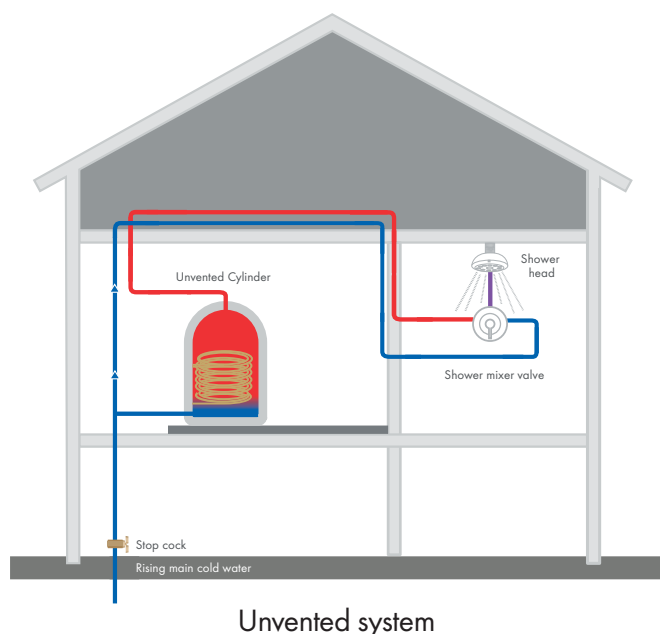

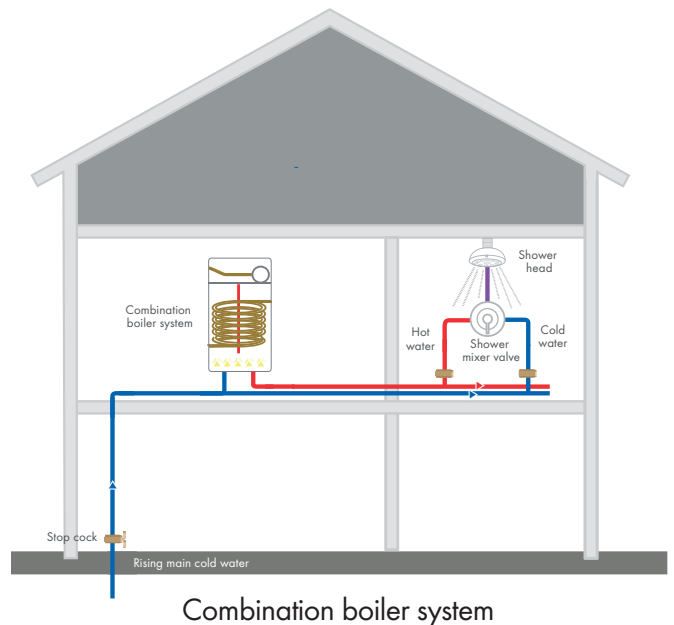

Universal 4.0 bar - 07002053 - £868.33 inc VAT

Is there a boiler, usually located in the kitchen, but no hot water storage cylinder?

Combination boilers heat mains fed water instantly and do not require hot water storage cylinders. Shower systems suitable for combination boilers are marked with a 'Combi' symbol.

Pumps cannot be used with a combination boiler.

Is there a hot water cylinder but no cold water tank in the loft?

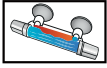

If your water system is 'unvented', the mains pressure coming into the property will remain in the system and provide the pressure for your shower system.

It is recommended that you identify your mains pressure before choosing your preferred shower system.

Your water provider will provide this information free of charge.
