

Coronavirus Update - 15th April 2020

The message is clear: stay at home, avoid all social interaction, and only travel to work if absolutely necessary.

Site Operating Procedures

The Following is an **abbreviated** version of the [Site Operating Procedures - Version 3](#) which has now been published by the Construction Leadership Council (CLC). (To see them in full follow the link above)

Introduction

The HSE is the relevant enforcing authority for PHE guidelines. If a site is not consistently implementing the measures set out by PHE, it may be subject to enforcement action.

Construction sites operating during the Coronavirus (Covid-19) pandemic need to ensure they are protecting their workforce and minimising the risk of spread of infection. This includes considering how personnel travel to and from site.

“where it is not possible to follow the social distancing guidelines in full in relation to a particular activity, you should consider whether that activity needs to continue for the site to continue to operate, and, if so, take all the mitigating actions possible to reduce the risk of transmission”.

The health and safety requirements of any construction activity must not be compromised at this time. If an activity cannot be undertaken safely, it should not take place.

Emergency services are also under great pressure and may not be able to respond as quickly as usual. This should be taken into consideration in the planning of work activities, first aid, fire and emergency responses.

Travel to Work

- Wherever possible workers should travel to site alone using their own transport.
- If workers have no option but to share transport:
- Journeys should be shared with the same individuals and with the minimum number of people at any one time
- Good ventilation (i.e. keeping the windows open) and facing away from each other may help to reduce the risk of transmission
- The vehicle should be cleaned regularly using gloves and standard cleaning products, with particular emphasis on handles and other areas where passengers may touch surfaces

Sites should consider:

- Parking arrangements for additional vehicles and bicycles
- Other means of transport to avoid public transport e.g. cycling
- Providing hand cleaning facilities at entrances and exits. This should be soap and water wherever possible or hand sanitiser if soap and water are not available
- How someone taken ill would get home
- Where public transport is the only option for workers, you should consider:
- Changing and staggering site hours to reduce congestion on public transport
- Avoid using public transport during peak times (05:45 - 7:30 and 16:00 - 17:30)

Driving at Work

When travelling at work or between site locations, workers should travel alone. If workers have no option but to share a vehicle, then they should:

- Share with the same individuals and with the minimum number of people at any one time
- Wherever possible maintain a distance of two metres and avoid touching their faces
- Maintain good ventilation (i.e. keeping the windows open) and face away from each other during the journey
- Wash their hands for 20 seconds using soap and water or hand sanitiser if soap and water are not available before entering and after getting out of the vehicle
- Regularly clean the vehicle using gloves and standard cleaning products, with particular emphasis on handles and other surfaces which may be touched during the journey.

Site Access and Egress Points

- Stop all non-essential visitors
- Consider introducing staggered start and finish times to reduce congestion and contact at all times
- Plan site access and egress points to enable social distancing – you may need to change the number of access points, either increase to reduce congestion or decrease to enable monitoring, including in the case of emergencies
- Allow plenty of space between people waiting to enter site
- Use signage:
 - such as floor markings, to ensure 2 metre distance is maintained between people when queuing
 - reminding workers not to attend if they have symptoms of Coronavirus (Covid-19) and to follow guidelines
- Remove or disable entry systems that require skin contact (e.g. fingerprint scanners) unless they are cleaned between each individual use
- Require all workers to wash their hands for 20 seconds using soap and water when entering and leaving the site
- Regularly clean common contact surfaces in reception, office, access control and delivery areas e.g. scanners, turnstiles, screens, telephone handsets and desks, particularly during peak flow times
- Reduce the number of people in attendance at site inductions and consider holding them outdoors wherever possible
- Where loading and offloading arrangements on site will allow it, drivers should remain in their vehicles. Where drivers are required to exit their vehicle, they should wash or sanitise their hands before handling any materials
- arrangements for monitoring compliance.

Hand Washing

- Allow regular breaks to wash hands
- Provide additional hand washing facilities (e.g. pop ups) to the usual welfare facilities, particularly on a large spread out site or where there are significant numbers of personnel on site, including plant operators
- Ensure adequate supplies of soap and fresh water are readily available and kept topped up at all times
- Provide hand sanitiser (minimum 60% alcohol based) where hand washing facilities are unavailable
- Regularly clean the hand washing facilities
- Provide suitable and sufficient rubbish bins for hand towels with regular removal and disposal

Toilet Facilities

- Restrict the number of people using toilet facilities at any one time and use signage, such as floor markings, to ensure 2 metre distance is maintained between people when queuing
- Wash or sanitise hands before and after using the facilities
- Enhance the cleaning regimes for toilet facilities, particularly door handles, locks and the toilet flush
- Portable toilets should be avoided wherever possible, but where in use these should be cleaned and emptied more frequently
- Provide suitable and sufficient rubbish bins for hand towels with regular removal and disposal.

Work Planning to Avoid Close Working

In line with Public Health England (PHE) guidelines, where it is not possible to follow the social distancing guidelines in full in relation to a particular activity, you should consider whether that activity needs to continue for the site to continue to operate, and, if so, take all the mitigating actions possible to reduce the risk of transmission.

Sites and work need to be planned and organised to avoid crowding and minimise the risk of spread of infection by following PHE and HSE guidance and the advice within these Site Operating Procedures.

Sites should remind the workforce (e.g. at daily briefings) of the specific control measures necessary to protect them, their colleagues, families and the UK population.

Hierarchy of Controls

If you are not able to work whilst maintaining a two metre distance, you should consider whether the activity should continue and, if so, risk assess it using the hierarchy of controls below and against any sector-specific guidance.

<p>Eliminate</p>	<ul style="list-style-type: none"> • Workers who are unwell with symptoms of Coronavirus (Covid-19) should not travel to or attend the workplace • Rearrange tasks to enable them to be done by one person, or by maintaining social distancing measures (2 metres) • Avoid skin to skin and face to face contact • Stairs should be used in preference to lifts or hoists and consider one ways systems • Consider alternative or additional mechanical aids to reduce worker interface <p>Site Meetings</p> <ul style="list-style-type: none"> • Only absolutely necessary meeting participants should attend • Attendees should be at least two metres apart from each other • Rooms should be well ventilated / windows opened to allow fresh air circulation • Consider holding meetings in open areas where possible
<p>Reduce</p>	<p>Where the social distancing measures (2 metres) cannot be applied:</p> <ul style="list-style-type: none"> • Minimise the frequency and time workers are within 2 metres of each other • Minimise the number of workers involved in these tasks • Workers should work side by side, or facing away from each other, rather than face to face • Lower the worker capacity of lifts and hoists to reduce congestion and contact at all times • Regularly clean common touchpoints, doors, buttons, handles, vehicle cabs, tools, equipment etc. • Increase ventilation in enclosed spaces • Workers should wash their hands before and after using any equipment
<p>Isolate</p>	<p>Keep groups of workers that have to work within 2 metres:</p> <ul style="list-style-type: none"> • Together in teams e.g. (do not change workers within teams) • As small as possible • Away from other workers where possible
<p>Control</p>	<p>Where face to face working is essential to carry out a task when working within 2 metres:</p> <ul style="list-style-type: none"> • Keep this to 15 minutes or less where possible • Consider introducing an enhanced authorisation process for these activities • Provide additional supervision to monitor and manage compliance
<p>PPE</p>	<p>Sites should not use RPE for Coronavirus (Covid-19) where the two metre social distancing guidelines are met.</p> <ul style="list-style-type: none"> • Where it is not possible to maintain a two metre distance, each activity should be risk assessed using the hierarchy of controls and against any sector-specific guidance, mindful that masks (RPE) are the last resort in the hierarchy • Re-usable PPE should be thoroughly cleaned after use and not shared between workers • Single use PPE should be disposed of so that it cannot be reused • Where personnel are required to work in specific environments (e.g. where persons are shielding, with symptoms, or confirmed Coronavirus (Covid-19) cases may be present e.g. healthcare or in a home environment) additional PPE should be considered specific to the Coronavirus (Covid-19) risk
<p>Behaviours</p>	<p>The measures necessary to minimise the risk of spread of infection rely on everyone in the industry taking responsibility for their actions and behaviours.</p> <p>Please encourage an open and collaborative approach between workers and employers on site where any issues can be openly discussed and addressed.</p>

First Aid and Emergency Service Response

The primary responsibility is to preserve life and first aid should be administered if required and until the emergency services attend.

- When planning site activities, the provision of adequate first aid resources must be agreed between the relevant parties on site
- Emergency plans including contact details should be kept up to date
- Consideration must also be given to potential delays in emergency services response, due to the current pressure on resources
- Consider preventing or rescheduling high-risk work or providing additional competent first aid or trauma resources.

Cleaning

Enhanced cleaning procedures should be in place across the site, particularly in communal areas and at touch points including:

- Taps and washing facilities
- Toilet flush and seats
- Door handles and push plates
- Hand rails on staircases and corridors
- Lift and hoist controls
- Machinery and equipment controls
- All areas used for eating must be thoroughly cleaned at the end of each break and shift, including chairs, door handles, vending machines and payment devices.
- Telephone equipment
- Key boards, photocopiers and other office equipment
- Rubbish collection and storage points should be increased and emptied regularly throughout and at the end of each day.

Remember: stay at home, avoid all social interaction, and only travel to work if absolutely necessary.

Take care and keep well.
