

## Cloud Consulting

Your trusted partner to simplify and understand the complexities of the cloud

**The range of potential IT consumption models is vast today, from operating your own platforms, through a range of hybrid offerings through to full “in the cloud deployments”**

### The Challenge

As the range of options has grown it has become sometimes difficult to objectively determine the right solution or mix of solutions for any given scenario. The cost, risk and complexity sometimes lead to a confused array of potential solutions being considered.

This potential complexity can give rise to high levels of risk. It is currently reported that over 50% of migration projects are set to exceed budget and cause disruption in 2019.

Identifying then examining and ultimately understanding this vast range of options can be both time consuming and, in some cases, daunting.

### The Solution

Bell's offerings and experience will ensure success in these types of transformations. We can help you remove the “Guesswork”.

Bell has a range of catalogue-based cloud consulting services that can help you navigate this process effectively. Bell also has an enormous track record in the successful definition and execution of every type and scale of program imaginable.

Selecting the correct target platform or platform design, accurately understanding the detail of every element of the current estate, testing, scheduling and migrating and transitioning are all key elements for success in this type of program.

### Why Bell

Whether you need an experienced partner to undertake the whole program or simply need a “Safe pair of hands” to support and assist through some elements of the process, Bell has a range of pre-defined service offerings that will reduce risk and accelerate time to value in every case. We also can provide a customised engagement that exactly matches your gaps and needs.

Experience also brings with it the “know how” that will ensure success and eliminate costly “over runs” and complexities. This experience will also guide you through the challenges of issues such as security and data management throughout the whole program.

Expertise can be the difference between a smoothly executed transformation and one fraught with unforeseen difficulties and complexities. With the right program definition, over-runs and abortive programs will avoid unforeseen costs which are described by leading industry analysts at between 30% and 50%.

**Let Bell be the partner to assist you in the successful outcome you desire, within the budget and timescales you plan.**
