

LIFT ENGINEER TRAINING

LIFT ENGINEER SAFE REGISTER

Ideal for: Anyone that works on lifts and needs a LESR card to verify their competence.

STRATEGY

One-on-One Consultation

If you employ lift staff that need to prove their knowledge and understanding of basic lift engineer safety when working on lifts to obtain a LESR card, we run a 1 day open training and examination course. Lift apprentices, lift mates, lift improvers and even experienced lift engineers have all attended previously and have been able to prove their competence and work on construction sites and in occupied buildings.

IMPLEMENTATION

Lift Safety Talks

We deliver the approved 'Lift Engineer Safe Register' training for safe access and egress to all common lift areas for traction and hydraulic lifts, including the correct procedures of gaining access to tops of lift cars and entering and exiting of lift pits in a classroom setting.

Dangers of Working on Lifts & Case Studies

Our training incorporates teaching on the dangers of your working environment, tools/equipment and the common materials and substances used. Other training includes working at height and confined spaces, incorrect use of electrical shorts to bypass essential safety circuits, unsafe working practices, damaged/missing guarding, water & oil in lift pits, high voltages, hot works and working practices that do not follow laid down procedures.

Exam

Once our training is complete, all delegates will sit an exam which is set under specified conditions and an assessment will be made as to whether the individual has passed or failed, (please note that exam results can take up to 20 days to be confirmed).

Validator Inspection

Each examination test paper will be checked for validity for its approval to be certificated and records are securely kept in our training centre, any fail notifications awarded against the exam can be inspected by appointment.

Lift Qualification Certificate

The Nationwide Academy of Lift Owners (NALO) operates a specialist lift engineering industry training board and certification body which adds credibility in the workplace and the assurance benefited from independent approval. Each delegate that successfully completes our training and passes their examination test paper will receive their lift qualification certificate via NALO.

Card Issue

You will receive your lift engineer safe registration card within a further 7 days and we automatically update the public register, the registration entry lasts for 3 years.
