### Hybrid ST2000 Cup

The popular ST2000 Smart-Fit Cup has a third configuration. A "hybrid", with an aluminium base and plastic molded walls combines the best of our aluminium and plastic ST2000 models. The aluminium base gives maximum strength as the notched ferrule fits perfectly into place, eliminating twisting, sticking and sinking. Plastic molded cup walls prevent chipping and provide a long-lasting finish. An aluminium bottom allows for the "traditional sound" of a golf ball hitting the bottom of the cup.

### ST2000 US Hole Cup

Our Most Popular Cup. Design allows soil to pass down the sides and through the cup, keeping the sockets dirt free, stops flagsticks from sticking to the cup. Combine the ST2000 with our notched ferrule flagstick and you've got the smart-fit system. The notches in our wide-shouldered ferrule mesh with the ribs in the ST2000 cup, stops flagstick rotation - the main cause of worn ferrules and leaning flagsticks. Brilliant white finish, the plastic is moulded with chemical-resistant polymers.

## Explanar

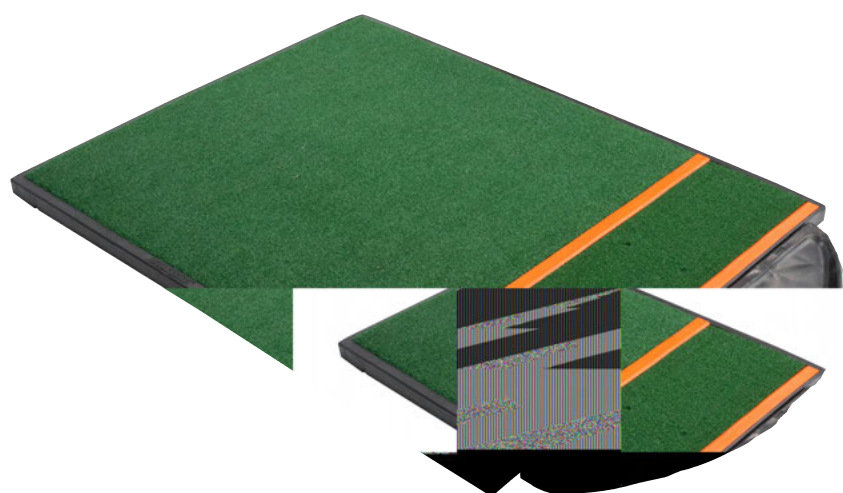

The golf swing is one of the most complex bio-mechanical movement performed in any sport and most people are only ever taught verbally. Now you can learn by feeling not thinking using the Explanar - a mechanical aid like training wheels on a bicycle, providing support and feedback that you can feel. Golf coaches find it easier to teach this complex movement with an Explanar, improving the way students learn and play and it is used by many of the World's top golf professionals and coaches. Available in home and junior versions.

## MAG STRIKE®

## Magstrike Mat

### Magstrike, the World's first magnetic golfing mat!

Magstrike mats are made using a unique worldwide patent. Magnets are positioned in the rubber frame and in the foam of the inserts and the opposing force of the magnets (north against north) pushes the insert away from the rubber frame and makes the insert float. When hitting the mat it 'bounces' in the magnetic field, completely absorbing the shock of the stroke. Whilst golfers using traditional mats tend to hit 'thin' shots when they go on the course since they hold back their swing, they can now hit a divot on the Magstrike mat using the 15mm of air to go 'into the ground' like a real shot on the course. Training will be less tiring and more enjoyable.
