

Mobile Roll Lift

Improve Material Handling Processes and More

The Mark Andy Mobile Roll Lift is equipped to solve the safety concerns often associated with material handling. The compact, battery powered, stainless steel design provides a turnkey solution for heavy cumbersome lifting, handling and rotating raw material, finished rolls, dies and laminate rolls. Various models are available to accommodate different weight capacities. The Mobile Roll Lift can be customized to include specific attachments to meet your business needs.

Features

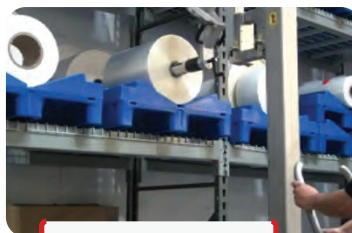

- Battery powered lifting – replace manual cranks
- Small footprint allows close access to equipment for loading/unloading lamination or hoisting a die
- Interchangeable components – attachments and wheels providing a single high-quality solution
- Safety features – control panel, wheel guards, user friendly handle bars and counterbalance weights for high/heavy lifting

Benefits

- Ease of use – improved maneuverability and ergonomics
- Faster changeovers
- Increased productivity

Mobile Roll Lift

What Model Is Right For You?

Mark Andy Mobile Roll Lift is the ideal solution for converters looking to minimize risk and maximize productivity making material handling safer, faster and easier.

A = How tall is the roll?

B = How wide is the roll in horizontal?

C = How high is the roll core from the ground?

D = How wide is the roll in vertical?

E = What is the maximum weight you will lift?

< 250 lbs

< 500 lbs

> 500 lbs

F = How high does the core need to go?

How will the rolls be picked up?

Are the rolls horizontal / vertical / both?
Are the rolls on a pallet always / sometimes / never? What type of pallet is it?
Do you use multiple size cores? Is it 3 inch / 6 inch / both?
Do you have any door height restrictions?
