

Unlocking Complexities

Smart Solutions to Meet Complex Drilling Challenges

With the global demand for energy expected to grow over the next several decades, the drilling sector of the energy industry is evolving to access the world's supply of oil and gas more efficiently in more complex and challenging subsurface reservoirs. Even today, the industry is facing the need for more technological advancements, and exploration and production companies need partners who can provide innovative solutions to access oil and gas in challenging locations.

Frank's International is the leading provider for innovative products, meeting the increasing demands of the rapidly changing oilfield environment and unlocking these complexities so customers can achieve superior drilling results, and reduce total cost of ownership across the life of the well.

Working with Frank's provides customers access to experienced professionals who anticipate and solve the most complicated drilling challenges. Our experts work closely with customers to apply best practices for a successfully drilled wellbore.

Keys to Unlocking Complexities and Value

Innovative Mindset

Frank's International is leading the way as oil and gas exploration reaches new frontiers and requires breakthrough technology. We are engineering and manufacturing progressive solutions that meet the demands of well operations within complex drilling environments.

Solutions Oriented

Frank's is known as a leader in tubular running services, but it's the company's legacy of ingenuity and leading-edge engineering that sets us apart. We deliver customized solutions to address specific needs to solve complex drilling challenges today and beyond.

Commitment to Safety, Quality and Reliability

Safety is a core value at Frank's International. Our target is zero incidents and injuries. We accomplish this through eliminating at-risk behaviors through observations and pre-job safety analysis. We focus intensely on the quality of our products and services to mitigate failures. Our unwavering commitment to safety, quality and reliability starts with an executive commitment to role model, reinforce and cascade safe actions to every level of our operations.

Service Focused

Frank's provides customers the equipment, services and knowledge they need to access the world's complex oil and gas supply. With a repeatable record of high performance and service, our customers can expect consistency and a prosperous well lifecycle underscored by a lower total cost of ownership over the lifetime of the well.

Serving Oilfield Reservoirs

The history of the oil and gas industry, and Frank's International, began onshore. Recent technological advancements on land, including horizontal drilling and hydraulic fracturing, have changed the nature of drilling, creating the need for more of Frank's innovative solutions.

As exploration moved to the waters of the Gulf of Mexico, North Sea, Western Africa and other offshore basins, Frank's also expanded its areas of expertise, to solve complex drilling challenges through technology and innovation, while maintaining our foothold on traditional drilling capabilities.

Deep Reservoir Solutions

The present and future state of offshore drilling is moving to more complex and deeper reservoirs – a specialty of Frank's. As drilling moves deeper, hotter and under more pressure, Frank's continues to set the standard for developing the equipment capable of drilling complex wells in challenging reservoir conditions.

A Legacy on Land

Frank's has been providing onshore drilling solutions since the late 1930s. Today, horizontal drilling and hydraulic fracturing are transforming land-based drilling operations. Frank's casing running tools combine conventional and unconventional drilling technologies with evolving innovation while maintaining the integrity of directional and extended-well drilling practices all over the world.

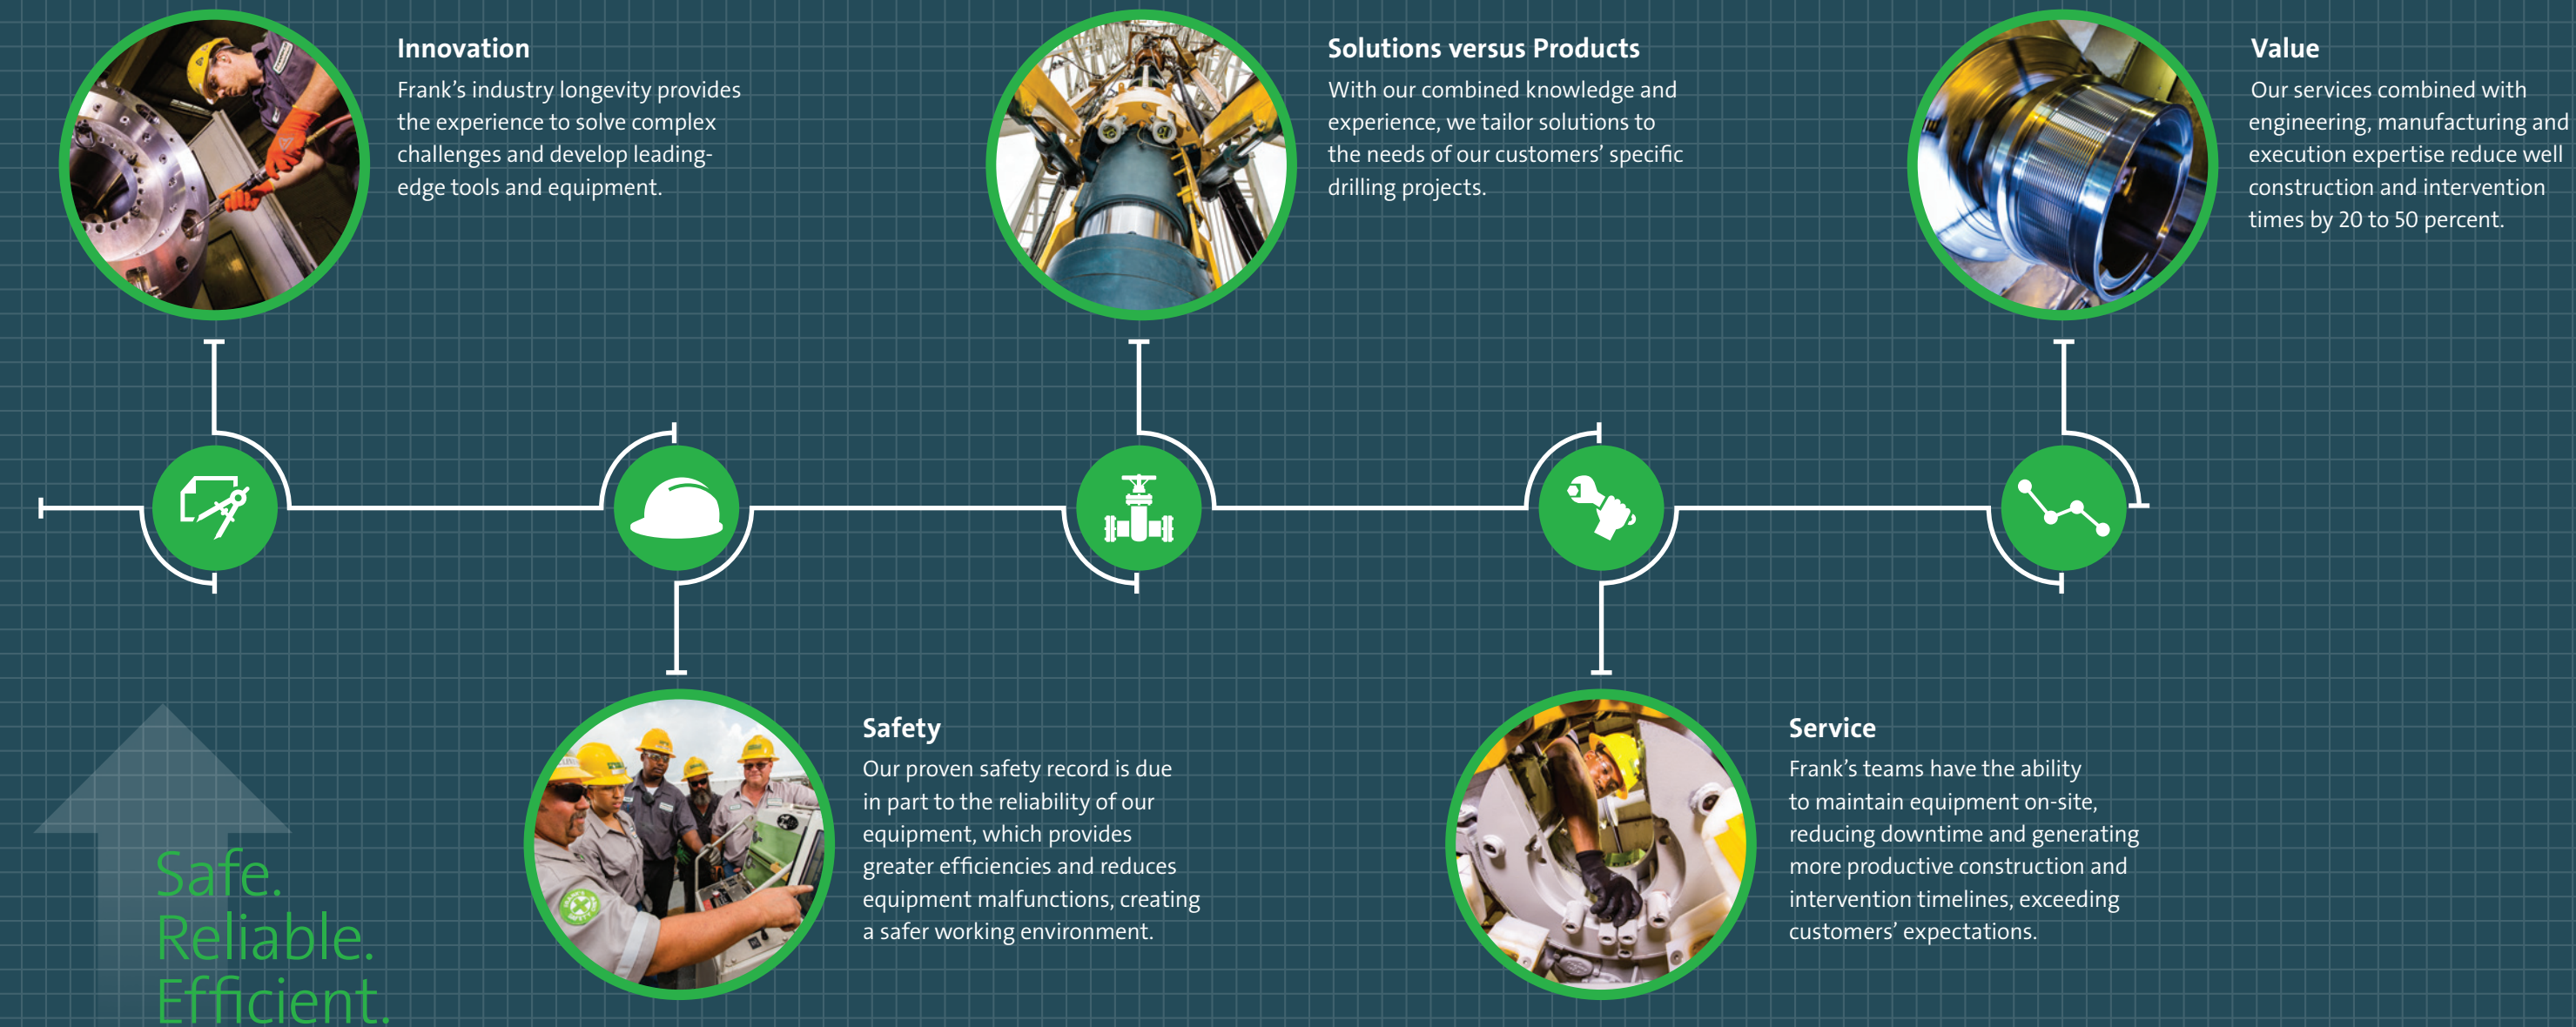

Mid-water Shelf Technology

Frank's utilizes its industry-leading knowledge and abilities to provide mid-water customers with the same technological sophistication brought to land and deepwater applications. Frank's safe, reliable and efficient capabilities provide true value to customers by keeping drilling operations on schedule and reducing rig downtime.

Maximizing Value + Minimizing Cost

With the vast experience and high-grade equipment we provide, our customers benefit from increased efficiencies of their drilling operations and reduced downtime, resulting in a lower total cost of ownership across the well lifecycle.

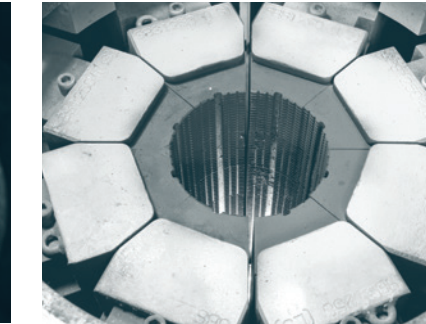

Innovative Solutions

Our ability to engineer and innovate first-of-their-kind tools and equipment, along with our safety and service records, sets us apart from others in the industry. Customers benefit from our technological sophistication in all drilling applications, through equipment designed specifically for the unique aspects of each well.

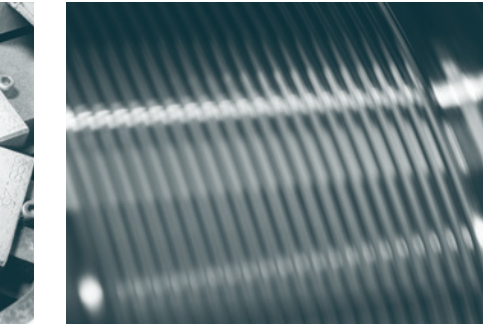

Completions and Well Architecture

Well integrity is crucial to an exploration and production company's success. Frank's longevity as a leader in tubular running services and as an expert in corrosion resistant alloy, positions us as the top provider of well completion, intervention and recovery services. With our intelligent completions technology and workover well capabilities, Frank's provides value through service excellence and high-quality products that create a more predictable and reliable wellbore environment.

Drilling Tools and Technology

Frank's ability to deliver reliable, high-quality products leads to more stable and efficient drilling operations through our superior technology. Our engineering team focuses on developing proprietary tools with procedures that create efficient and safe operations when running and pulling casing.

Tubular Products and Fabrication

As the industry's leader in tubular running services, Frank's provides customized, large-diameter tubulars and fabrication services to customers across the globe. We manufacture a large supply of multiple length, high-grade, heavy wall outside diameter (OD) pipe and connectors that exceed the standard for welding applications, while delivering safety and reliability to traditional and complex drilling projects.

2 STRINGS WEIGHING IN EXCESS OF **2** MILLION LBS
RECORD-BREAKING STRENGTH

Founded in 1938, Frank's International, N.V. is publicly traded on the NYSE under the symbol FI. With a diverse, global workforce spanning over 60 countries across the globe, Frank's is an industry leader in engineering, manufacturing, servicing and installing tubular running products. Frank's understands the importance of providing consistent performance and exceeding our customers' expectations. The company provides learning and development opportunities to create a cross-functional workforce, adept at providing world-class service and exceeding the needs of customers while they expand their search for oil and gas. The company is proud of its grassroots heritage, and today embraces the same entrepreneurial and innovative approach for which the company was founded.
