Introduction

The Web Server board bom-008-01 allows connection between bathomatic® and the LAN. The correct configuration of this board is critical for the remote control of bathomatic® and the instructions below will help you in the configuration process.

Hardware installation

1. Turn power OFF
2. Remove bom master controller cover
3. Insert Web Server board bom-008-01
4. Connect COM5 to LAN via standard CAT5 cable
5. Turn power ON
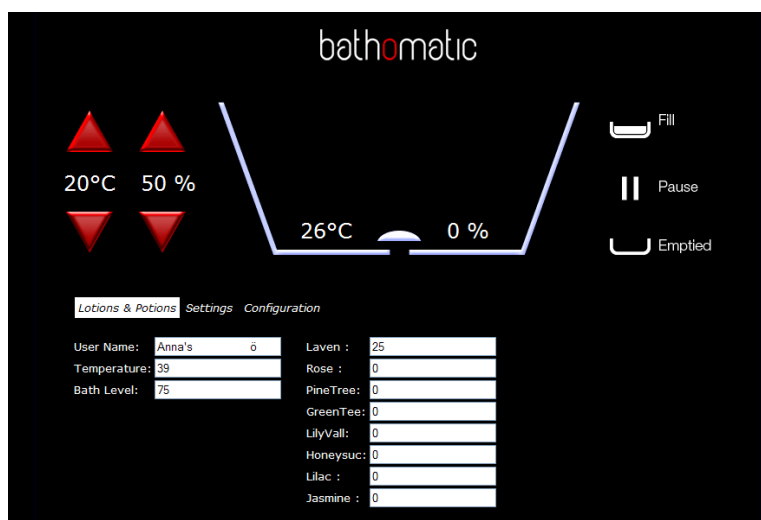

Software Configuration

1. Find bathomatic's IP address
   a. Use an IP Scanner from a PC connected on the same network as bathomatic®

   or

   b. Scan the network with our "Q devices" for iPhone which is free from Apple Store. This is an easy option when you have iPhone (iPod Touch) connected via WiFi on the same network as bathomatic®

2. Access bathomatic® via LAN. Type the IP address of the bathomatic® into the browser address bar[1] and the bathomatic® web page will appear. From this page you can gain full control over bathomatic®. From running a bath to new settings, renaming user presets and settings to IP configuration Changes.
3. IP configuration Changes. The bathomatic® Network Board is on DHCP by default, but the IP address can be made static. Once you access the bathomatic® web server you need to enter "Configuration"[2] by typing the default User Name "admin" and Password "b4th0mat1c".

   Here you can make and save your desired settings
