## We're waiting to hear from you!

- we believe in friendliness and individuality  
as well as professionalism so get in touch,  
sit back, and enjoy dealing with us!

# Midland Filtration

- a filter company built to suit you...

# There are many filter companies for you to choose from, so why come to us?

Because we have learnt over time that every customer has their own needs and priorities, so a "one type suits all" approach doesn't really work.

So we listen to you and tailor our service to suit – which is why year after year we are awarded the highest accolade possible from our ISO 9001 customer satisfaction surveys. What more can we say?

\*Opposite are just some of the comments our customers have kindly supplied:

*"We're very pleased with them. We've used them for years and there's a reason for that"*

*"They understand me perfectly. I don't know why, but they do!"*

*"They always bend over backwards to help"*

*"We are relatively new and satisfaction level is very high."*

*"They are exceptionally good"*

*"They're all very friendly. They're always there for advice. I can't fault them at all."*

Now tell us what you want from a filter company, and let us start looking after you...

Whatever you need...

## Filters and more...

**The boring bit...**

**Application**

**Efficiencies**

**Flow Rates (velocity)**

## Glass Panels

**Low grade pre-filtration, not suitable for food or higher efficiency requirements**

G2-3

Up to 1.8 m<sup>2</sup>/s

## Pleated Panels

**Available from pre-filtration to final filter grades, suitable for most applications**

G4 - F8/9

Up to 2.5 m<sup>2</sup>/s

## Wire Frames

**Low grade slimline usually found in A.C. splits. Media can be synthetic, washable foam or nylon mesh**

By design

By design

## Media

**From general applications to paint spray**

G2 – F5

Up to 1.8 m<sup>2</sup>/s

## Pad Frames

**Holding system for disposable media pads**

Not applicable

Not applicable

## Bag Filters

**Low grade pre-filtration to high grade high volume bags**

G4 - F9

2.5 m<sup>2</sup>/s or higher by design

## Rigid Bags

**Medium-high grade, suitable replacement for bags offering longer life and energy savings**

F5 – H10

2.5 m<sup>2</sup>/s

## Carbons

**Odour removal, gas and solvent absorption**

By design

By design

## HEPAs

**Higher filtration giving optimum particulate efficiency**

H10 – Ultra

By design

## Grease Filters

**Kitchen extract and low grade particle filters in knitmesh and baffle technology**

G2

By design

## Cartridges & Socks

**Process, liquid, air, hydraulics and dust filtration**

G3 – H14

Flow rate by design

## Belts

**Plain and cogged v-belts, pulleys and taper locks**

Not applicable

Not applicable

## Frames & Clips

**A full range of holding systems and fasteners for your filters**

Not applicable

Not applicable

## Gauges

**Magnahelics, inclined manometers and fluid**

Not applicable
