**Polymers Compounded to your Specifications
and accurately colour matched every time**

Polymers Compounded to your Specifications

and accurately colour matched every time

Established in 1993, Polymer Compounders Limited specialise in the manufacturing and distribution of engineering thermoplastic compounds for the Injection Moulding and Extrusion Industries. We progressively increase the product ranges we offer which now include ABS, Polycarbonate, PC/ABS Alloys, ASA and other Engineering Thermoplastics.

PCL products are increasingly used in a variety of industries ranging from automotive and transport, building, leisure and outdoor equipment, hygiene and medical, household appliances and white goods.

Our versatile manufacturing site allows us to offer tailored additive packages including flame retardant, UV and heat stabilisers, antistatic, anti-microbial and gloss delustrant, as demanded by your application.

We can also toll-compound your resins (PP, PS, etc.) and due to partnerships, we have access to Polyamide PA6 and 6.6 grades.

Our flexibility allows us to offer a first class service on quality and quantity to meet whatever your application demands.

Please visit our website for further information.
