# About Us

**Based in the UK, Structural Engineering Services works with both international and local clients and specialises in providing reliable, practical structural designs and calculations.**

Our structural engineers work with different building types while drawing structural calculations for an extensive variety of purposes. We frequently work on large commercial and industrial projects and also operate within the residential and domestic arena.

Structural Engineering Services create calculations using computer-aided designs which we manipulate to gain a firm understanding of the building in question. Our structural engineers work with architects, construction contractors and surveyors on a daily basis, providing assistance to deliver 3D designs on numerous building types.

Our structural engineers and CAD technicians provide clients with a high level of professional service. We have worked hard to build a reputation for efficiency. The service provided entails site visits to meet clients

and property surveys, which are crucial to delivering higher customer satisfaction.

Customer input is key at an early stage of the design process. In this way, our structural engineers glean a better understanding of the customer's individual needs and requirements.

In conclusion, our structural engineers possess extensive knowledge in both the technical aspects of structural engineering and practical aspects of construction procedures. We at Structural Engineering Services look forward to working with you.

Structural engineering services' senior engineers have over thirty five years of experience in the industry.

## Why We Are Different

Structural Engineering Services create calculations using computer-aided designs giving us an in-depth understanding of the building. We work hard to make our clients' ideas and visions to come to life. Our structural engineers work with architects on a daily basis, which allows us to deliver 3D designs on numerous building types.

## Award Winning Design

Structural Engineering Services' senior engineers have over thirty five years of experience in the industry. This involves working closely with designers, architects, builders, residential and commercial property landlords.

# Written Reviews

We have worked with Structural Engineering Services for over 10 years and found their engineering to be sensible and efficient. They are extremely good at finding solutions to difficult problems in structures and are always prompt and efficient.

**Philip Nicholson | Architectural Services Group**

Structural Engineering Services understand structure very well and always specifies steels that are 'right' for the job as opposed to churning out the same old schemes that work structurally but are not in the best interests of the build. We like to use certain steels/ layouts on our projects and Structural Engineering Services always tries to accommodate our requests after checking that they work from an engineer's perspective.

Some engineers are rigid in their approach but Structural Engineering Services are very flexible and helpful which can save a whole lot of time and money on a job and they often produce drawings and supporting calculations in a matter of days which is a real bonus. I can't recommend these engineers highly enough.

**Pierre Alphonse | Armadillo Lofts**

I've worked with Structural Engineering Services for more than 10 years and have always found their work to be excellent and the turnaround fast - we now simply don't use or recommend anyone else.

**Philip Nicholson | Andooi.com**

# GENERATING NEW IDEAS. SOLVING BIG PROBLEMS

Structural Engineering Services' senior engineers have over thirty five years of experience in the industry. Some stats:
