

Further Increase in Capacity

August 2013

To meet increasing demand for secure off site document and data destruction, Paper Shredding Services (PSS) have acquired additional space of around 4000 square feet.

This depot, adjoining the current one, will be home to their recently purchased AXO 608 in-house, conveyor fed shredder, capable of shredding up to two tonnes of paper per hour.

Working alongside their existing in-house shredder PSS are able to securely shred and bale in excess of 3 tonnes of paper per hour.

All shredded material, known as recovered fibre, is dispatched to UK paper mills for recycling.

If this service is of interest to you please call us on 0800 071 4000.
