

# An essential part in the HVAC system, the Interior Blower

NRF offers a wide Aftermarket range of almost 200 interior blowers for passenger cars, light commercial vehicles and trucks. NRF interior blowers are designed and manufactured according to strict requirements to ensure high performance, quality and durability.

## NRF interior blowers

As an engine cooling and A/C parts supplier, NRF also offers a range of interior blowers. To guarantee excellent quality, comfort and durability, NRF interior blowers are subject to a number of advanced and stringent tests. These tests consist of performance, mechanical and electrical tests.

### Benefits:

- High performance and durability
- Perfect fit for easy installation
- Low noise for maximum comfort
- Extensively checked and tested

### Competitive range

2 years ago NRF introduced this product group to their Aftermarket product range. Since that time this product group has grown rapidly. Currently the total range exists out of almost 200 interior blowers covering more than 600 O.E. references.

The range mainly exists out of interior blowers for passenger cars and light commercial vehicles, but also includes 16 truck references for the most common truck brands.

### An essential part of the system

The interior blower is an essential part in the heart of the HVAC (Heating, Ventilation and Air Conditioning) system of a vehicle.

The blower is controlled by a resistor, which is either build-in or mounted separately. **Later this year NRF will introduce a range of resistors as a new product group.**

It is important that the interior blower is functioning. If the blower stops working the evaporator can freeze. The interior blower is usually located underneath the dashboard.

### Stringent test procedure

Most common reasons for interior blower failure are failures in the vehicle's electrical system, reduced flow in the air intake system and improper product handling during installation.

### A complete range

Since 1927 NRF is a leading manufacturer and supplier of cooling products for the automotive market, industrial, railway and marine sector. NRF offers more than 8.000 Engine Cooling and Air Conditioning parts, which is constantly expanding. Recently NRF added EGR modules and coolers for passenger cars and trucks.

The NRF range includes also 1.000+ Easy Fit references. When a part is Easy Fit, the assembly parts (such as O-rings, clamps and clips) are included in the box. This ensures an easy and quick installation of the part.
