

Case Study

Winsford Civic Hall—Cheshire West & Chester

Demolition works and asbestos removal works were undertaken at Winsford Civic Hall in Cheshire. The project is the first framework contract being undertaken for Cheshire West & Chester with Complete Demolition acting as Principal Contractor. The works involved the site being fully hoarded, scaffold erection, removal of asbestos, demolition and remediation works.

The demolition design required part of the building to be demolished using a high-reach excavator. The remainder of the buildings was demolished using two 30 tonne excavators fitted with specialist demolition attachments. Prior to the demolition works getting underway the asbestos containing materials were removed under fully controlled conditions. The building was soft-stripped of materials such as hard-wood timber floor, carpets, ceiling tiles and grid ceilings.

Complete Demolition Ltd are proud to be undertaking this first contract for Cheshire West & Chester Council.
