World Leader in Street and Race Wheels

Custom aftermarket wheels are as much a part of who we are as the clothes we wear, the vehicles we drive and of course the performance that we expect. ENKEI custom wheels deliver the latest in wheel designs, composite alloy technology such as, casting/forged processes, rigid testing that must pass stringent JGTC Standards and unsurpassed manufacturing facilities. Enkei is dedicated to perfection and delivers the best in aftermarket wheels.

Today, the Enkei group is commercially active throughout Asia, North America, Latin America and Europe, supplying all the largest Japanese car manufacturers and General Motors in the OEM market, as well as countless consumers in the automotive aftermarket. Enkei also produces sophisticated high-tech race wheels for a variety of motorsport, including rallying, drift, sportscar racing and single-seater racing – including supplying lightweight magnesium Formula 1 race wheels to McLaren Honda. Enkei has been an Official Supplier to McLaren F1 Team since 1995.

ENKEI MOTORSPORTS

Enkei has been racing in top competition championships of the world for three decades. As a result of continuous improvement and technological advances, Enkei continues its winning tradition and constantly challenges new horizons in wheel technology.

ONE STEP FORWARD

Since its formation in 1950, Enkei's history has been continuous challenges and adventures to deliver the most innovative and the highest quality wheels to top racers and car enthusiasts. Today, Enkei has grown to be the number one aluminum wheel manufacturer to satisfy demand from leading automakers and aftermarket wheel users around the world. One step forward. With its courage to take the next step ahead of others, Enkei continues to strive to exceed the expectations of the most demanding drivers.

Engineering Philosophy

What is the most important consideration when building a wheel? What specifications does a performance wheel require? In general, the most recognizable performance aspect for users is light weight. You will know the weight difference by simply picking up a wheel. Most drivers can also feel the difference in steering response. Since an automobile wheel is a rolling object, the lightness of the wheel plays into the inertial weight. Enkei's focus is not limited to the lightness, however. To attain maximum wheel performance, Enkei also focuses on stiffness and strength.

A high quality wheel requires all three elements: light weight, stiffness, and strength.

STIFFNESS

Stiffness is the basis of wheel performance. What is "stiffness"? If a rim is stiff, it will resist deformation when it is subjected to force. Although we consider metal as "hard", metal does have a tendency to deform when force is applied and return to the original shape when the force is eliminated. Stiffness is often confused with strength, but it is different as strength is a measure of tendency toward breakability. To make the best out of today's high-performance tire, wheels need to have high stiffness to keep the proper connection between the chassis and tires. On the other hand, wheels with low-stiffness could easily be deformed by the load from the tires. Enkei recognizes stiffness is the most important element for high performance wheels.

ALUMINUM EXPLAINED: PRODUCTION METHODS WILL NOT AFFECT STIFFNESS

How can we increase the stiffness of wheels? As long as wheels are made of aluminum alloy, using a different production method does not affect the stiffness of the wheel. That's because all aluminum alloys used for forging and casting create same material property with identical stiffness.

Comparison of Wrought aluminum alloy and Cast aluminum alloy

Material	Specific gravity	Young's modulus*
Wrought aluminum alloy	2.70MG/cm ³	70GPa
Cast aluminum alloy	2.68MG/cm ³	70GPa

* Young's modulus is a measure of elasticity, equal to the ratio of the stress acting on a substance to the strain produced.

You may think forging process creates stronger materials. However, when forged and cast aluminum alloys are measured by the Young's modulus, it shows almost no difference between two methods. Forged and casted aluminum alloys are nearly identical in specific gravity as well. Therefore, if you make an exact same shape of wheels using forging and casting method, the weight of those wheels should be the same. What is the advantage of the forging process, then? It is an ability to produce higher material strength.

Generally speaking, compared with casting, forged material is superior in yield strength and tensile strength. However, no matter how great the material strength, it cannot justify an extreme reduction in weight.

Even with adequate material strength, if wheels lack stiffness, they cannot perform properly even with high-performance tires.

DURVILLE DIE CASTING & MAT PROCESS

Enkei has adopted two technologies – the Durville die casting and MAT process that ensure cast aluminum wheels have strength comparable to forged ones. In the Durville process, molten aluminum alloy is poured into the mold from its inner rim side, with the disc side facing downward. The alloy is rapidly quenched and solidifies, starting at the disc side, creating a finer metallic structure, significantly enhancing tensile strength, yield strength and elongation.

In the MAT process, the wheel rim placed on a mandrel is spun and rolled. This spinning process creates "metal flow" in the metal structure of the aluminum alloy, which is similar to the metal property seen in the forging process.

This hybrid process of casting and forging gives wheel high material strength while keep manufacturing cost more affordable than forged wheels. Additionally, it gives greater freedom of design on the wheel face.

DESIGN CAPABILITY BEHIND THE BEST WHEELS

How does Enkei ensure its wheels have high stiffness? The answer is Enkei's "Design Capability".

To maintain high stiffness under great force, the wheel's cross sectional area in the direction against the force applied needs to be enlarged. Unfortunately, the larger this area is, the heavier the wheel will get. However, if the layout, cross sectional shape of the spokes and the rim profile are designed properly, the wheel can maintain high stiffness without adding weight.

The layout is made possible by Enkei's vast accumulation of wheel design data and the computer aided engineering 3D simulation. In addition, Enkei strives for the largest possible weight reduction by identifying the wheel portions where stress concentration is least likely to occur and shaving down areas that do not affect stiffness.

Enkei's processing techniques ensure the "strength" of its wheels, and its excellent design capability ensures "stiffness" and "lightness." Enkei's design capability is the most-treasured asset and essential for developing the highest performance wheels.

SPEC-E

All Enkei wheels are engineered to pass rigorous testing. In fact, Enkei established its own test standard called "Spec-E," which is tougher than JWL requirements. Enkei's Spec-E test setting requires a higher drop point in the impact test and 20% more cycles for the rotary bending fatigue and dynamic radial fatigue tests than JWL standards. The Spec-E standard shows Enkei's confidence in its technology and the quality of Enkei wheels.

ENKEI HERITAGE

Enkei started in Japan as "Enshu Keigokin Co. Ltd.," which translates as "light alloy of the Province of Enshu." Enkei's technical knowledge, developed through the manufacturing of aircraft parts, was later utilized in the initial development of aluminum motorcycle and automobile engines. Today Enkei has established itself as a pioneer of aluminum wheel manufacturing. As the recognized global leader of alloy wheel production, Enkei delivers more than 16,000,000 wheels a year and has manufacturing facilities in Japan, the United States, and many Southeast Asian countries. With new horizons to be conquered, Enkei will always continue to move "one step forward."

RACING SERIES

Introducing Enkei's Racing Series. Enkei's experience in producing wheels for racecars is unrivaled. Enkei is actively involved in supplying wheels for Formula 1, WRC, Japan GT Championship, Super Taikyu, Formula Drift and many others. The racetrack is our laboratory. We've taken what we've learned in racing and are proud to offer the same technology found on racetracks all over the world to auto enthusiasts looking for a no compromise wheel solution for their cars. Enkei's state of the art facilities in Japan utilize MAT technology to achieve the ultimate in lightness and strength for our racing series wheels, while maintaining excellent value. When you demand the very best, look no further than Enkei's racing series.

MOST ADVANCED TECHNOLOGY

Enkei developed a new manufacturing process to produce the next generation of aluminum wheels. Most Advanced Technology (MAT) combines one-piece cast wheel technology with a rim-forming "spinning" technique. Use of this new technology of casting and rim forming, is critical to drastically improve the material properties and strength of wheels. In addition, Enkei's rim-rolled technology shapes the rim to improve material elongation without sacrificing the wheel's hardness.

(shown without stickers applied)

Matte Black

Racing is where all of the best R&D happens. Engineers obsess over every detail looking for the slightest advantage to shave fractions of a second off of lap times. What we learn on the world's premier circuits is eventually implemented into mainstream products and made available to the weekend racer. That's how the new Enkei GTC02 was born. Based on the RA series wheels used in the Super GT racing series, the GTC02 pulls from the same bag of tricks as the RA series to give weekend racers the competitive edge they need to win. Utilizing a 6 split spoke design that disperses stresses efficiently allows us to keep the spokes as thin as possible and make cuts in them on the fronts and sides to shave weight even further. The GTC02 is available in sizing ranging from 18x8 to 19x10.5 in a wide variety of PCD and offset configurations to fit most modern sports cars.

RPT1

16, 17, 18 - Racing Series

**Truck
Application**

The Enkei RPF1 was first introduced to the world in 2002 and it was an instant hit thanks to its high strength, low weight, and no-nonsense design. Truck and SUV owners have often asked for Enkei to develop an RPF1 for them and we listened. The all-new Enkei RPT1 features the same clean split spoke design as the RPF1, but is built to higher loading capacities to suit 6-lug trucks and SUVs. Available in 16", 17" and 18" applications and a variety of colors, the RPT1 is one of the lightest weight and toughest truck wheels on the market today.

Titanium Gold
(Limited Sizes / Special Order)

The GTC01RR is made after one of our strongest wheels, the GTC01. After vast research, we were able to keep the high rigidity while making it light weight, comparable to the RPF1. The GTC01RR has been tested in high performance categories including cornering, braking, acceleration, deceleration, and steering response. The GTC01RR is available in three different concave faces as displayed below.

Racing Revolution

RS05RR

18 - Racing Series

New Supra Fitment Available

Designed to look incredible while retaining Enkei's racing spirit & functionality. The light weight RS05RR is made using Enkei's MAT-DURA flow forming method. With the RS05RR, there's no need to choose between form or function, you can simply have both. Made in 18x8.5-18x11 with 3 different concave face designs. In Silver or Matte Gunmetal.

Seven dynamic spokes reach toward the edge of the flange in a concave fashion to give the wheel additional depth and the appearance of being one size larger. The sides of the spokes are thinned to make them lighter while emphasizing the concave shape. This is combined with a double-lipped flange for an especially aggressive look. The concepts of toughness and sport serve as inspiration for these design features. The wheel's rim is formed with MAT technology to achieve a high level of strength, rigidity, and light weight. The face is engineered to accommodate a large brake caliper and to enhance brake cooling performance during high speed driving.

PF01 EVO

17 18 - Racing Series

From time attack to drifting, the PF01EVO wheel is designed to maximize the performance of 17 and 18-inch tires, which are popular among these circuit racers fans. When mounted on a vehicle with over fenders, the minimum inset starts from 0 mm, widening the settable tread width range.

The PF01EVO wheel adopts ENKEI's proprietary MAT process technology to ensure both the high rigidity and lightness required for an uncompromising sport wheel.

WIDE APPLICATION

Responding to popular demand, the PF01 offers a wide variety of applications ranging from 15x7 through 18x10.5. This wheel also has a large brake caliper clearance to meet car enthusiasts' needs.

ROULETTE PATTERN

Our unique roulette pattern is grooved on the rim to reduce the slip-page ratio between tire and rim. The roulette-pattern maintains the best condition of the wheel and tire assembly, thus achieving the highest performance during extreme acceleration and deceleration. The roulette pattern is also used for McLaren Honda Formula One racing wheels.

NT03+M

18 - Racing Series

Designed with a perimeter brace ring that enhances the wheel strength so it's able to resist deformation or distortion from outer forces, resulting in highly accurate steering response and strength. The NT03+M also features a racing twin valve design which allows for accurate monitoring while adjusting the pressure.

TUNING SERIES

Introducing Enkei's Tuning Series. Contemporary wisdom says that you've got to give one good thing up if you want another. Not so with the Enkei Tuning Series! Enkei is proud to offer light weight and strong wheels that won't leave your pocketbook empty. Utilizing Enkei's world class manufacturing abilities, Enkei has lowered the cost of the MAT spin forging production process even further, allowing us to produce a new line of wheels built using the same methods as the Racing series, but at a lower price point.

MOST ADVANCED TECHNOLOGY

Enkei developed a new manufacturing process to produce the next generation of aluminum wheels. Most Advanced Technology (MAT) combines one-piece cast wheel technology with a rim-forming "spinning" technique. Use of this new technology of casting and rim forming, the MAT process, is critical to drastically improve the material properties and strength of wheels. In addition, Enkei's rim-rolled technology shapes the rim to improve material elongation without sacrificing the wheel's hardness.

Titanium Gray

TSR-6

18 - Tuning Series

We're literally putting a new twist on an old style. Taking inspiration from the iconic and super-light RPF1, we developed the all new TSR-6. With its twin 6-spoke design, it achieves an open look that promotes airflow to the brakes, but without sacrificing strength and rigidity. The TSR-6 is available in sizes ranging from 18x8 to 18x9.5 with PCD and offset configurations for a wide variety of high-performance cars.

TSR-X

18 | 20 - Tuning Series

Gloss Black

Introducing Enkei's first ever Tuning Series Wheel available in 20". Enkei's Tuning Series wheels have taken the market by storm thanks to their high-strength MAT construction and competitive pricing. Due to increasing customer demand for a lightweight 20" wheel in this series, we are proud to introduce the all-new TSR-X. Available in Gloss Black, Bronze, and Storm Grey, the TSR-X is the perfect option for those looking to go big while keeping weight down on their late model sports coupes, sedans, and even crossovers.

TS-V

17 | 18 - Tuning Series

Building on the success of the Enkei M52 and YS5 as inspiration for a light-weight new tuning wheel led us to create the all-new TSV. The TSV features 10 paired spokes that are spaced perfectly to even distribute the loads and stresses placed on wheels at the track. Doing this allows us to reduce the weight on the wheel without sacrificing rigidity. The result is a classic and clean wheel design that works beautifully with late model sports sedans and coupes. The TSV comes in 17" and 18" sizing and widths up to 9.5", and is available in Storm Gray, Gloss Black, and limited Gloss Bronze.

TS-5

17 | 18 - Tuning Series

New Civic TypeR Fitment Available

Gloss Black

Storm Gray

The all-new lightweight Enkei TS-5 is sure to be an instant classic in the tuning world. The TS-5 is the wheel that will have everyone admiring it at a loss for words because it just does everything right. It is remarkably simple and clean, relying on the tried and true 5-spokes and a lip formula, but the TS-5 gets the aesthetics just right. It is the golden ratio in wheel form. It screams motorsports and whispers class at the same time. It is just as much at home on track as it is on the street. With 17" and 18" sizing and widths up to 9.5", the TS-5 will suit a remarkable variety of sport sedans and coupes.

TS-10

17 | 18 - Tuning Series

Now Available
in 18x10.5

The Enkei TS-10 takes the simplest approach to achieving Enkei's philosophy in creating a lightweight and strong wheel. Its 10 cleanly cut spokes reach the very edge of the wheel, creating the illusion that the wheel is bigger than its true size. The TS-10 is available in concave and flat face profiles dependent on size and width. The TS-10 is finished off with Enkei's signature flat center cap and is available in new storm gray, gloss black, or limited gold paint.

TFR

17 | 18 | 19 - Tuning Series

Simplify and add lightness. That's the approach Enkei has taken with the TFR Tuning Series wheel. Seven perfectly contoured spokes start from a center with carefully placed cuts to save every ounce possible. The TFR is the wheel you can autocross with on the weekends and drive to work with during the week. It is truly versatile. The TFR is available in 17", 18", and 19" sizing in all new Copper, Storm Gray, and limited Gunmetal finishes. The wheel is finished off with Enkei's signature flat center cap.

The RAIJIN is a light weight street wheel designed for the everyday driver but with added MAT technology performance benefits. Named after the Japanese god of thunder, the RAIJIN is bound to help you bolt through traffic not only with style but with better overall performance. Having a light weight wheel helps brake more efficiently, helps accelerate quicker and can even help with fuel economy. You'd be surprised how much difference a few pounds makes.

18" come with Cap # A468-CAPCP; 19" come with Flat Cap # A476-CAPCP

TY-5

18 | 19 - Tuning Series

The Enkei TY-5 is an exciting entry in Enkei's lightweight Tuning series. Utilizing a sleek combination of a split 5-spoke style with the center styling cues of a mesh wheel, the TY-5 is a great choice for a wide variety of wheels ranging from small sports coupes to full-size luxury cars. It is available in several exciting colors including hyper black, gloss black, and an all-new limited pearl black. The TY-5 is available in concave and flat face profiles dependent on size and width, and includes Enkei's signature flat center cap.

TSP6

17 | 18 - Tuning Series

The Enkei TSP6 represents the culmination of Enkei's research and design efforts. Using some of Enkei's own split 6-spoke designs as inspiration, we've modernized the concept with aggressively styled spokes and added concave profiles in select sizes. The TSP6 is also built using Enkei's original MAT technology to achieve the ultimate in strength and light weight. The TSP6 comes standard with Enkei's signature flat center cap, which is the perfect finishing touch.

KOJIN

17 | 18 - Tuning Series

The KOJIN takes the traditional 5-spoke design and adds just the right contours to give it an aggressive tuner look without being too loud about it. The KOJIN is built using Enkei's original MAT technology to achieve the ultimate in strength and light weight. The Enkei KOJIN is where art and science meet to create the next big step forward in wheels.

VULCAN

17 | 18 | 19 - PERFORMANCE SERIES

The Enkei Vulcan Performance wheel is the perfect choice for those wanting to add bold style to their sporty coupes, sedans, and crossovers. The Vulcan's unique split spoke design starts with pockets around the center that are not only a styling cue, but a design feature that also helps reduce the weight of the wheel. The Vulcan is available in 17", 18", and 19" sizing in black machined, gloss black, and limited anthracite finishes.

PHOENIX

17 | 18 - PERFORMANCE SERIES

The all-new Enkei Phoenix is the perfect choice for those looking to add an aggressively styled wheel to their daily driven car. The Phoenix features a distinctive pentagonal center with 5 sharply cut dual level spokes that create incredible depth while retaining excellent caliper clearance. The spokes split shortly off of the center at an aggressive angle and flare out all the way to the outer flange. The Phoenix is available in 17" and 18" sizing for most sedans, coupes, and small SUVs. The Phoenix is available in our striking new blue gunmetal finish or gloss black and is finished off with our signature flat center cap.

STORM

17 | 18 | 20 - PERFORMANCE SERIES

SUV/Crossover
Fitment Available

The modern crossover is the do-it-all vehicle and Enkei has set out to craft a wheel that can keep up with the do-it-all lifestyle that crossover owners demand. Taking inspiration from the NT03+M Racing wheel, the all-new Storm features 8 broad swept spokes that are tied together with Enkei's signature brace ring to add strength and rigidity. The Storm is available in 17", 18", and 20" sizing in configurations that work well with modern crossover SUVs and large sedans.

DRACO

15 | 16 | 17 | 18 - PERFORMANCE SERIES

From day one, Enkei has always been about offering stylish and sporty wheels that are also tough enough to stand up to the rigors of high-speed driving. We've taken that philosophy to heart with the all new Enkei Draco. This modern and aggressive V-Spoke wheel is well suited to modern performance sedans and even some small SUVs & Crossovers. It is available 15" through 18" in an all-new anthracite or black machined finish and comes with a cleanly styled center cap to complete the look.

SS05

17 | 18 | 20 - PERFORMANCE SERIES

SUV/Crossover
Fitment Available

Taking design cues from the classic Enkei FD-05, the SS05 combines sharp and aggressive cuts on the spokes with an iconic split 5-spoke design. With an extra high load-rating, the SS05 is well suited to uni-body SUVs and Crossovers, but is also a perfect choice for many modern sedans. The SS05 is available in both black machined and hyper gray in 17", 18", and 20" sizing. Enkei's signature flat center cap finishes off the clean and understated look of the SS05.

VORTEX 5

17 | 18 | 20 - PERFORMANCE SERIES

SUV/Crossover
Fitment Available

The Vortex5 is one of Enkei's boldest designs of all time. Featuring a number of sharply angled thinner spokes coming together to create a cohesive broad-spoke look, the Vortex5 is the perfect wheel choice for those looking to make a statement. It works well on uni-body SUV and CUVs and on mid and full-size sedans. The Vortex5 is available 17", 18", and 20" in an all-new anthracite machined or gloss black finish. Enkei's signature flat center cap completes the look.

SVX

**CROSSOVER VEHICLE
FITMENTS AVAILABLE**

18 | 20 - PERFORMANCE SERIES

Black Machined

The SVX is all-new design territory for Enkei. With SUVs and Crossovers becoming ever more sleek and fluid in design, we created a wheel that would complement the increasingly complex lines of these vehicles. The SVX does that perfectly, utilizing five broad spokes that flare out as they reach toward the outer edge of the wheel. A v-shape milled out of the face of each spoke contours around a split toward the end of each spoke and is painted gloss black or silver to give contrast with the machined surfaces on the wheel. The wheel is finished off with Enkei's signature flat center cap. The SVX is available in black machined or silver machined and fits a wide variety of crossovers, high-offset SUVs, and even some sedans.

ONX

**SUV/Crossover
Fitment Available**

17 | 18 | 20 - PERFORMANCE SERIES

The ONX is an exciting addition to Enkei's SUV/Crossover lineup. Using the design language of the popular Enkei CUV, we've created a sporty new option for owners of crossovers and small SUVs. The ONXs sharply angled spokes extend all the way to the edge of the wheel to give it the appearance that it is larger than it really is. Offered in a sleek Gloss Black or Gloss Black Machined colors with Enkei's signature flat center cap, the ONX is a great way to add personality to any late model SUV or crossover.

ICON

17 | 18 - PERFORMANCE SERIES

The Enkei Icon is the perfect choice for those that want to add a subtle bit of flair to their sporty sedan, coupe, or small SUV. The Icon's clean split 5-spoke design works perfectly with the wheel's pearl black finish. Enkei creates this signature finish by first painting the wheel black. After machining the tops of the spokes, we apply a tinted clear coat to create a unique two-tone black finish. The Icon is offered in 17" and 18" sizing with fitments for a wide variety of late model vehicles.

YS5

16 | 17 | 18 - PERFORMANCE SERIES

The YS5 is an all-new take on the classic Split-5 design from Enkei. We've strived to keep the lines composing the spokes and hub area of the wheel as simple and clean as possible. The spokes are as close as possible to perfectly perpendicular, relative to the outer lip. The lines creating the transition from spoke to hub area are equally aggressive. From this transition, there is a vertical drop to the hub area. All of these design cues create a wheel that looks great on almost any car.

M52

15 | 16 | 17 | 18 - PERFORMANCE SERIES

The M52 is Enkei's take on the traditional split 5-spoke wheel. Available in 15" through 18" sizing and in hyper black or matte black, the M52 is the perfect choice to add sporty flair to any sporty coupe, sedan, or crossover.

PDC

16 | 17 | 18 - PERFORMANCE SERIES

Gloss Black

Hyper Gray

The classic mesh style wheel looks great on nearly everything, but Enkei wanted to add a bit of a twist to this all-new style. The wheel starts with a sharply angled center area from which the spokes come up quickly and split off in the classic style. Look closely though and you'll notice a deep diamond shape cut in to the spokes just before the split. This styling cue and the sharp lines on the PDC make it the ideal choice for anything ranging from a small coupe to a full-size luxury car.

TRUCK & SUV SERIES

Introducing Enkei's Truck Series. While Enkei is most well known for its high-performance car wheels, it is proud to offer a range of wheels designed for trucks and SUV's as well. Enkei has applied its unrivaled engineering capabilities to come up with several designs that will stand up to the tough demands that truck and SUV drivers place on their wheels. Utilizing Enkei's world class manufacturing facilities and emphasizing function over flare, the Enkei truck series offers a great way for truck and SUV owners to add some styling to their vehicle, while maintaining the tough and rugged capabilities they count on from their wheels.

MATRIX

17 | 18 | 20 - TRUCK & SUV SERIES

2019 Ford Ranger
Fitment Available

Enkei is the most successful brand of all time when it comes to racing wheels. Using all that we've learned about what it makes to make a tough racing wheel, we've set out to raise the bar on truck and SUV wheels. The all-new Enkei Matrix features a classic mesh design with a subtle lip. 17" versions are available in exclusive new brushed gold and brushed black finishes. 18" and 20" Matrix wheels feature genuine stainless steel bolts around the front flange, not vacuum chromed plastic like others. 18" and 20" Matrix wheels are offered in gloss black and gunmetal finishes. All sizes are available in fitments that are perfect for lifted vehicles.

BRUSHED FINISH: The Matrix's new brushed gold and brushed black finishes are an exciting development for customers that are tired of the same old black and silver wheel options. Utilizing a unique process where we apply a base coat, mill the face, apply a special texturizing top coat, and then another tinted top coat results in a truly stunning finish. Both the brushed bronze and brushed black will have admirers everywhere asking where to get the same thing for their trucks!

Black Milling

Bronze

COMMANDER

17 | 18 | 20 - TRUCK & SUV SERIES

The Enkei Commander is big and bold just like the trucks it was designed for. With its classic split 6-spoke design that brings the spokes all the way out to the front flange, the Commander is a great way to give your truck an aggressive look. Our new milling process adds a ton of character to black milled versions of the wheel. Don't forget that it comes in a unique bronze finish in select sizes too!
