Data Recovery

The availability of company files and data is taken for granted until the day a disaster occurs. Files can be corrupted, damaged or deleted by user error, viruses, natural disasters or hacking. To safeguard against data loss it is vital that robust procedures are put in place before the event occurs. At TAB Computers we have a wealth of experience in Implementing strong backup strategies so that if major data loss occurs it becomes an inconvenience rather than a catastrophe.

Hardware Maintenance and Repair

Keeping your IT resources running at peak performance can be a challenging task. At TAB Computers we understand the importance of keeping business IT running as smoothly as possible. We can assess your current systems and analyse your networks for areas that can be improved. Our qualified technicians can quickly get to the root of any potential issues and if necessary source replacement parts from our trusted suppliers. Get in touch with us today to book your free audit and report.

Wireless Connectivity

A wireless LAN (Local Area Network) allows users to access the Internet, data and files without the restriction of a physical connection to the network. This is perfect for users of laptops, mobiles and tablets and is an excellent alternative to drilling through walls or ceilings. Often though, security on wireless networks is not as strongly enforced as it should be and unwanted intrusion can cause serious problems from simply slowing down your Internet to the potentially devastating consequences of data theft. TAB Computers can audit the security procedures for your wireless network and offer advice on how to strengthen any areas of weakness.

Server Installation

TAB Computers provide full planning and support for businesses that wish to upgrade from small networks to larger domains. It can be a complex procedure but one in which we have years of experience, so you can be confident that when you choose us to oversee your project, we will deliver on time and within budget. There are many benefits to your business when upgrading to a domain and our experienced team would be very happy to discuss the options with you.

Network Installation

Keeping the flow of network data running at optimum speed will have a big impact on business productivity. Hardware costs for network components have fallen sharply in recent years, making the most modern networks affordable to almost everyone. The older 100Mb networks are now being replaced by the newer gigabit (1000Mb) networks, meaning that information can now flow between devices at up to 10x the original speed. Give us a call today and speak to one of our highly experienced engineers about the cost effectiveness of making such a change.

Services

System Security

To help keep your IT system free from viruses and other malicious intent, we provide a free IT audit which will identify any potential areas of weakness in your networks and provide advice about how best to minimise the threats. We can also help you to restrict access to certain areas of sensitive information by use of encryption, password protection and the setting of user permissions. Speak to us today for help and advice on making your sensitive business data as secure as possible.

Internet and Email Service

We all take the Internet and email for granted. It's become part of our business life and without it the business simply couldn't function properly. Sometimes it's annoyingly slow which has an impact on productivity, but rarely does it stop…..But when it does, who do you call? Is it your Internet Service Provider? Your router? Your switch or cables? Has your server stopped providing the services necessary to make the Internet work? Have your email providers servers gone down for maintenance? Have your ISP's DNS servers changed? What is a DNS server? At TAB computers we have the experience to pinpoint the exact point of failure within minutes so give us a call and we'll get you back up and running again in the shortest possible time

Data Cable Installations

TAB Computers have years of experience in cabling and network installations. We have helped many businesses streamline their workflow and increase their productivity with some relatively inexpensive network improvements. Whether it is planning a brand new network, fixing broken network points or simply reorganizing a server cupboard. TAB Computers can improve your transfer speeds which translates into time and money savings. Call us today for a free IT audit and quotation and see how we can help.
