

Your Fuel Efficiency Solution

Your engines might be efficient – but your fuel isn't.

Unburnt fuel results in you wasting hundreds of thousands of dollars every year – despite the millions invested in the development of engine optimisation. Fuel injection and electronic timing, turbocharging, advanced materials, and precision manufacturing all help your plight to reduce fuel consumption and emissions... but there are huge inefficiencies still left untapped.

The fuel itself is the answer to your fuel consumption cost and emissions reductions. With new NanOx™ technology, you will save with every treatment. It's GUARANTEED.

NanOx™ is TUV CERTIFIED to 7% fuel saving – and is the only fuel additive approved by Wartsila.

It is guaranteed you will:

- Make your fleet more fuel efficient
- Reduce emissions
- Increase engine power
- Reduce maintenance costs.

Your Obligation to Reduce Fuel Emissions

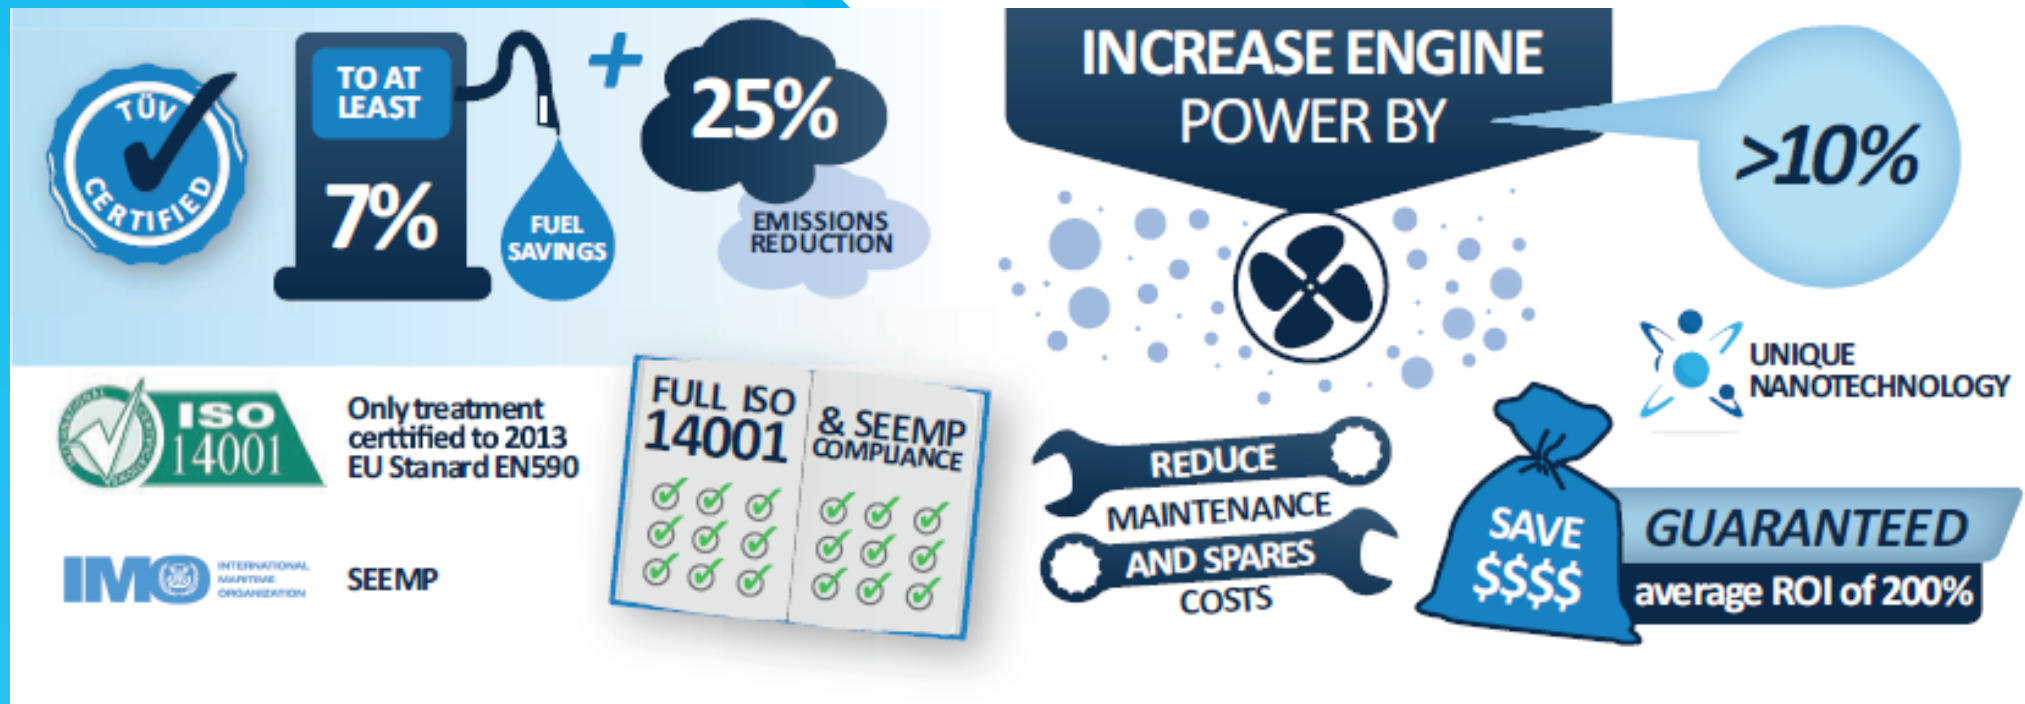

Section 5.27: *'Additional means to improve engine efficiency might include use of fuel additives'.*
Section 5.40: *'Efforts could be made to source fuel of improved quality'.*

You must **'take actions to continually improve'** - including emissions to air, energy emitted, generation of waste products, and use of raw materials.

NanOx™ guarantees to address every single one of these requirements – and promises to save you money in the process!

Slash your fuel costs and reduce emissions

NanOx™: Your Fuel Efficiency Solution

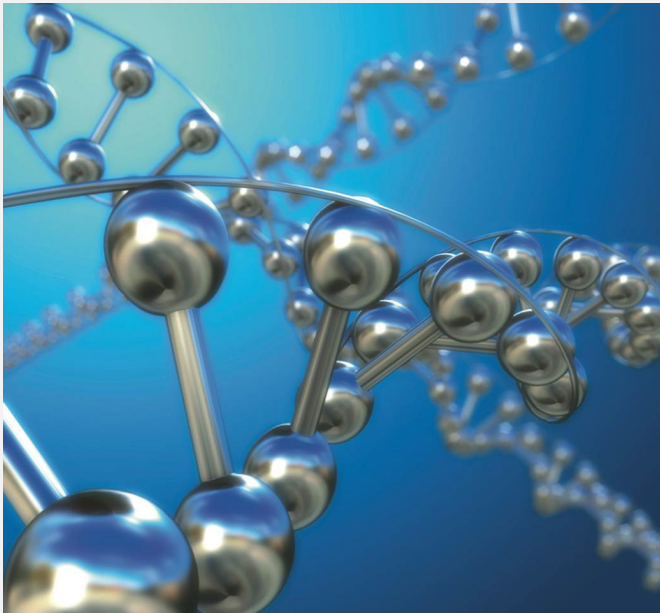

How Does It Work?

NanOx™ works through nanotechnology – so small, it can't be seen with the naked eye. A molecular catalyst, NanOx™ ensures that ALL of your vessel's fuel is used to its maximum potential.

You will find it significantly increases your fuel efficiency and reduces emissions at the same time, as no fuel is wasted – so you save money with every single journey.

Reduce Maintenance Costs, Improve Engine Lifespan

NanOx™ doesn't just work for the fuel you put in: it will also reduce engine wear, meaning you can extend the time between maintenance. The NanOx™ particles work on existing carbon build-up within the engine to effectively blast away residue to improve performance – and add to fuel efficiency, of course.

Fuel Saving Illustration

Bunker price \$165/tonne
1l NanOx™ @\$47 treats 10 tonnes of fuel
7% TUV certified fuel saving on \$1650 of fuel

In other words, 1l NanOx™ saves \$115.50 in fuel – a 250% ROI!

Be the future of fuel efficiency

NanOx™ – Now it's time to try it yourself. Contact us today for an exclusive trial price!

Slash your fuel costs with NanOx™
