

StableGRASS MAXI

Large panel, fully interlocking grass paver

WHAT IS IT?

StableGRASS MAXI is a uniquely large grass grid for the reinforcement and containment of grass surfaces, to facilitate regular use and access by both vehicular and pedestrian traffic.

The fully interlocking panels are 1.200 x 0.800 mtr x 38mm deep. This allows for installation in a brick bond pattern which, combined with the reduction in joints, adds substantial stability to the construction and performance. In addition the larger units facilitate significantly faster placement.

StableGRASS MAXI panels are tested to resist minimum compression loadings of 65Kn per square metre, with greater loading capacity achievable depending on the sub strata used.

The design and strong construction of the cells allows for superior provision of root development space with minimal restriction.

LOW CARBON FOOTPRINT (Breeam compatibility):

StableGRASS is manufactured from 100% re-cycled HDPE and is UV treated. The product can be fully re-cycled in itself which leads to an ultra-low carbon footprint in manufacture, use and disposal.

As a permeable paving which facilitates vegetation growth the end result is environmentally beneficial whilst enabling land use for pedestrians and vehicles.

PRODUCTIVITY:

A key benefit with StableGRASS MAXI is that the large panels allow exceptionally fast rates on placement. This translates to making selection of StableGRASS MAXI even more cost effective.

WHAT DOES IT DO?

StableGRASS provides reinforcement for seeded grass, turf, green roofs or sedum surfaces to allow regular pedestrian access and vehicle use in a variety of applications. Depending on sub base provision these can include car parking, vehicle, plant and equipment access, access roads in environmentally sensitive areas, communal social spaces and woodland pathways.

The system can be used both as containment of growing vegetation or as reinforcement under turf, and is naturally permeable.

SUDS (Sustainable Drainage):

The system can replace hard surface paving, which would require planning permission application for approval in Sustainable Drainage terms. As a permeable surface, use of StableGRASS will eliminate water run-off, presenting minimal impact on demand for surface water drainage capacity.

StableGRASS can be used in conjunction with full permeable sub-base construction or water harvesting installations.

**Two heavier duty grades in black are available on special order: 50mm deep StableGRASS PRO and 70mm deep StableGRASS HD.*

AVAILABLE LOCALLY FROM

Hardscape Resourcing Ltd.
Westleigh Hall • Wakefield Rd
Denby Dale • Huddersfield
