Simplifying Facility Management

Technology at work for you

ENFORCING CORPORATE POLICY, INCREASING SAFETY AWARENESS & ELIMINATING TOBACCO SMOKE.

Radal Technology USA LLC are world leaders in the manufacture and design of unique product solutions to eliminate illicit smoking and assist in reducing industrial related accidents. Our products are sold into 25 countries in 35 different languages and we supply to almost every industry imaginable.

The Cig-Arrête range of products detect tobacco smoke, or the flame from a match or lighter, and play an audible alarm requesting persons to extinguish their smoking materials or move to a designated smoking area. Any message of any length can be broadcast to ensure that both staff and visitors comply with the smoke free legislation without the need for management involvement.

In addition to the washrooms, the most problematic area within a facility are the entrances where staff and visitors gather and smoke drifts back into the facility. The Cig-Arrête weatherproof flame and motion sensors are installed in these areas to provide warnings that these areas are designated smoke free.

flexible solutions for your facility needs

RADAL TECHNOLOGY PROVIDES A TOTAL END TO END SOLUTION.

SAFETY SYSTEM SOLUTIONS

Both the SpeechPOD SD Evolution and the RadAlert talking Sign System are triggered by motion sensors and provide an effective method of reinforcing warning messages related to specific risks. Messages are recorded and played in crystal clear clarity in single or multiple languages warning staff of a special risk such as slippery floors, or in the food processing industry for example, to wash hands thoroughly before returning to work.

Many facilities across the USA have different nationalities employed within the workforce. Often, employees do not speak English as their first language. By using SpeechPOD or RadAlert, Health & Safety Officers can ensure that warnings of risk are provided in the employees own language, thereby increasing awareness and reducing accidents due to misunderstandings.

- Voice messaging improves communication to staff and visitors.
- Reduce slips, trips and falls.
- Talking signs provide audible and visual media to underline actions.
- Increase hand hygiene standards in one easy step.

PRODUCT SOLUTIONS

- OUTDOOR / ENTRANCE FLAME DETECTION.
- OUTDOOR / ENTRANCE MOTION DETECTION.
- COMBINED OUTDOOR DETECTION / WARNING.
- SAFETY CONTROL TALKING SIGNS.

CUSTOM SOLUTIONS

Radal Technology specialize in the provision of highly sensitive equipment to reinforce facility policy. Whatever your application, Radal can offer a tailor made, cost effective solution to meet your needs.

TOBACCO SMOKE SOLUTIONS

The internationally specified Cig-Arrête brand products are manufactured in the UK. These award winning products provide the most cost effective solution to illicit smoking problems, internally or externally.

HEALTH & SAFETY SOLUTIONS

Tackling Health & Safety issues saves lives, reduces accident rates and reduces absenteeism and employment related costs.

Simple steps taken to increase Health & Safety policy will increase profits and improve employee attitudes.

**FOOD PROCESSING
& MANUFACTURE**

ELIMINATE ENTRANCE SMOKING

A choice of flame detection, motion detection—or both!

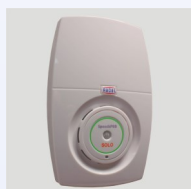

The Cig-Arrête SD Evolution outdoor weatherproof units will play any message of any length, requesting smokers to move away, use the smoking shelters, or leave the site depending on the hospital policy.

HEALTH & SAFETY MEASURES

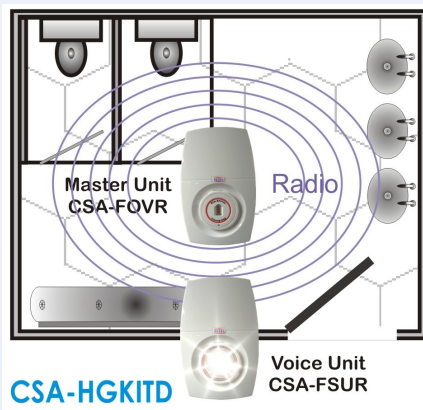

RadAlert Talking Signs have been used effectively in facilities to reduce accidents and provide clarity regarding risk.

By effectively communicating special risks using targeted voice messages, accidents can be reduced and employee wellbeing increased.

SpeechPOD contains a 2GB SD card. Any message in any language can be recorded. The motion sensor detects persons and the message is played. Used in many facilities to request hand washing or gel application before returning to work.

ELIMINATE ILLICIT SMOKING FROM RESTROOMS

Typically, facility washrooms are the first area targeted by employees wishing to smoke.

The Cig-Arrête SD Evolution products are designed to monitor the washrooms for tobacco smoke and relay the alarm to management for action.

Voice messages are standard on all products, but may be switched off to provide a covert system if required.

**CONSULTING
SALES
SOLUTIONS**

Radal Technology USA LLC has over eight years of expertise in the development of cost effective solutions to the problem of illicit tobacco smoking, infection control and slip, trips and falls. Our staff can assist your hospital in improving performance in these areas.

This corporate brochure is only a guide to our products and consulting services. Our new website contains details of all the products including individual product videos, datasheets and sample message sound files.

In addition, there are a number of customer testimonials providing their own view of what we do and how we do it. We invite you to visit our site and find out more about how we can assist you in becoming smoke free or reducing your infection rates within your facility.
