

WEATHERPROOFING ADVISORS LIMITED

# National Grid Canterbury North

SPOTLIGHT ON **PROJECTS / FLAT TO PITCH CONVERSIONS**

## Weatherproofing Advisors were instructed, by National Grid PLC, to carry out the multiple roof replacements to the Canterbury North substation site.

The project consisted of 7 different roof areas. The site has been classed as 'High Profile' as it is home to the largest colony of Pipistrelle Bats in the UK.

Although the majority of the roof areas were re-designed and covered with a Flat to Pitch system, two of the areas were subject to heightened sensitivity due to this housing the bats maternity roosts. Subsequently, any system that penetrated the existing roof covering had to be dismissed. With this in mind, Weatherproofing Advisors installed a liquid applied waterproofing system that provided the client with a 20-year guarantee.

Flat-to-Pitch system provide the client with a number of advantages, none more so than changes the complete shape, design and aesthetics of a building. With an array of prospective roof coverings on offer the building can be truly transformed. Naturally other benefits include, extended warranties, improved insulation, additional storage space (where applicable), eradicates ponding water plus many more.

With our highly trained operatives, working closely with National Grid all works were carried out while the site remained fully operational. These works were carried out in conjunction with our 4-year Framework agreement and subject to National Grid's rigorous procurement and Health and Safety processes.
