

WheelPopper

Removes tyres from steel and alloy rims in seconds.

All AutoDrain equipment is
HSE, ATEX and DSEAR Compliant

Fast and efficient

The WheelPopper is the fastest way to separate scrap wheels and tyres. Complete separation in just 15 seconds, allowing you to process up to 240 wheels per hour, saving you time and money.

Easy and comfortable to use

The design reduces bending and stretching, which in turn reduces operator fatigue and risk of injury.

One machine required

The WheelPopper can process steel, alloy, light commercial and 4x4 wheels.

Built to last

Robust all steel construction means low maintenance costs and a long service life.

**The AutoDrain WheelPopper will save you time
and improve safety**

WheelPopper

Simple, effective, fast and efficient

Specifications:

Electro hydraulic

Three phase electric motor or diesel options

All steel construction

Easily moved with a forklift truck

L170cm x H 230 cm x W 115cm

The compact design allows the machine to be located in the depollution bay to maximise efficiency. A key element to our comprehensive range of depollution equipment.

The WheelPopper is so quick and simple to use - just position the wheel, grab the edge and pop out the middle!

800% efficiency gains?

Manually removing tyres from wheels will typically take a dismantler a few minutes per wheel. Over the course of a morning we have seen operators process around 160 plus wheels in a morning.

• Free online training information and video

• Training at our own ATF in Leeds- price on application

AutoDrain Training
Training is vital to ensure that you maximise the profitability and longevity of your WheelPopper and we have the following training options available for you:
