KEY TRAITS

VIGOROUS ESTABLISHMENT

Proven ability to establish robust, well-rooted plants that are best able to cope with challenging UK conditions.

DOUBLE PHOMA RESISTANCE

The combination of the RLM7 gene and polygenic resistance provides outstanding, durable resistance to phoma stem canker and flexibility in fungicide application.

POD SHATTER RESISTANCE

Genetic resistance that minimises yield loss and volunteer issues caused by seed shedding up to, and during harvest.

RECOMMENDATIONS

Seed rate should target an even plant stand of 25-30 plants/m² in spring.

Light Leaf Spot should be monitored and treated as required.

The rapid autumn growth habit means a PGR may be appropriate in early/mid October on very forward crops to reduce the risk of over development pre winter.

BREEDER'S VIEW

“DK EXCEPTION is a good choice for growers throughout the UK. It has given outstanding gross output over a wide range of UK and European locations. It features pod shatter resistance and very high lodging resistance. Initial work suggests that it has improved Nitrogen Use Efficiency.”
