

ONELAN

Integrated Player Displays

ONELAN offers a range of integrated signage which combines the digital signage player into the display panel itself. These space saving products are ideal for making an impact with shelf edge and point of interest applications.

With ONELAN's optional multitouch interface the integrated displays can be used for way finding or as a kiosk. These have effective application across retail, corporate, small business and public sector markets.

Applications

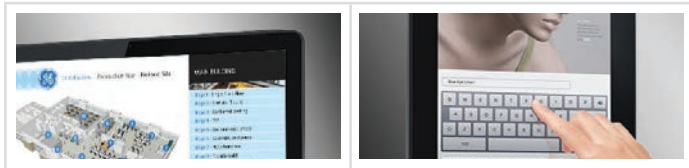

Shelf Edge / Advertising

The slim all in one digital signage solutions are available in a range of screen sizes from 10.1" to 21.5" and are ideal for installation in tight spaces

Point Of Information

The displays have great viewing angles and WiFi is included as standard across the range

Wayfinding

The range of accredited content partners are on hand to help you develop a bespoke way finder to meet your needs

Kiosk

With multitouch as an option across the range, the displays can easily be implemented as a kiosk

Data Integration

- ◆ ONELAN's Data Collection Engine allows content to be driven by a range of external systems. This allows you to make changes centrally e.g. to a products price in a database or spreadsheet, this update is then dynamically rolled out across all players

Content Playback

- ◆ ONELAN currently support full screen HTML5 playback. New features coming soon include: video and image zones, scheduling and conditional play

Web - HTML5

ONELAN understand that in certain situations specific hardware must be used to display your content. To support you in this case they offer a test and certification programme. Their engineering team will test compatibility of your Android device and their signage player to ensure that you have a reliable and secure solution which delivers high quality content.
