

Re: Sperrin Metal

5th April 2011

To whom it may Concern,

Sperrin Metal Products Ltd., worked closely as a sub contractor for John Sisk Ltd in 2010 to supply a newly constructed warehouse with approximately 19,500 Pallet Locations for Primark/Penneys. This contract was conducted efficiently and professionally.

The £500K contract was completed two weeks ahead of schedule with four installation teams working seven days a week on twelve hour shifts. It was fully installed over a four week period including all contract snagging. Sperrin's installation crew worked in conjunction with a sprinkler system company i.e. Mercury Engineering, where half of the double runs of racking were installed in the evening time to allow the sprinkler system to be fitted early the next morning and then the other half was installed. Both companies worked and communicated together and as such Sperrin's production, delivery and installation was co-ordinated competently over a six week period in five phases and the completion was presented to a flawless finish.

The business association has proved of mutual benefit and we have no hesitation in endorsing Sperrin Metal Products Ltd as a professional provider in the field of shelving and racking systems. I can be contacted on 087 286 5378 should anyone need clarification on the above.

Yours sincerely,

Gerard McConnell
