## Ricoh and Josero raise L4100 profile

Ricoh will exhibit in partnership with Josero to jointly showcase the Pro L4100 latex printer and Josero's extensive product portfolio.

"This new strategic approach at Sign and Digital UK demonstrates Ricoh's commitment to further building its knowledge base to more precisely understand how its products are used," explains the company's Gareth Parker.

In addition to CMYK, orange, green, and white inks are also available on the ThePro L4100, which tops out at 18.2sq m/hr.

The Pro L4100 latex will be the star attraction on Ricoh's joint stand with Josero

### Stand: E36

## Trotec to unveil large-format SP500

Trotec Laser is to showcase the SP500 large-format laser cutter with its new Job Control Vision system.

The technology will form part of a much wider product offering at the show and complete a core range which allows sign-makers to create signage systems out of substrates such as wood, plastic, and metal.

However the new system has been designed to accommodate applications such as paper and card scoring with a super-fine beam and control system.

With a working area of 49 x 28", the pass-through feature also enables the user to process very long and bulky parts.

For the first time at a trade show in the UK the SP500 will feature Job Control Vision, a camera function which locates pre-printed designs by 'reading' registration marks achieving precise laser cut results.

The SP500 can process everything from paper to wood

## Friedheim in UK first with Neo 2517

Friedheim International will be demonstrating for first time at a UK event the Lasercomb ProDigi Neo 2517 large format multi-functional digital cutting system. This model is one in a range of larger format machines specifically developed by Lasercomb for the high demands of the signage, packaging and display industries.

On the ProDigi Neo a new front end PC featuring a colour touch screen, which allows the operator to choose between automatic or manual modes, as well as accessing the tool database — the PC also provides operational diagnosis.

The Lasercomb ProDigi NEO 2517 has a 1KW cutting spindle

## Fujifilm showcases UV inkjet thermoforming

Fujifilm will demonstrate the full range of creative jobs that can be produced with its range of Acuity large-format printers and Euromedia range of roll media. The multinational firm will also demonstrate the light industrial applications of its new thermoforming Uvijet KV inks.

On show will be 32.8sq m/hr hybrid Acuity LED 1600 wide-format printer. One of the world's biggest producers of graphics ink, Fujifilm will also showcase how its Acuity Advance Select and Uvijet KV inks can be combined for printing high value thermoformed objects.

The latest additions to the Euromedia range of sign-making materials include SmartTack White and SmartTack Ghost; which are robust, PVC-free polyester self-adhesive films.

Fujifilm will showcase its Uvijet KV inks and their thermoforming applications
