

# Landscape

## 85mm X 55mm

### How to create a print ready PDF:

1. File > Save as
2. Output > PDF/X-1a: 2001
3. Marks & Bleeds
4. Choose "Trim marks"
5. Set bleeds to 3mm

THE  
BUSINESS  
PRINTERS

#### **Bleed area:**

The **bleed area** should be 3mm from the edge of the finished document. Any text, image, background which is at the edge of your background should be extended into the **bleed area**. This will avoid any white edges. The **bleed area** will be trimmed off, so anything you wish to show in your print, must not be in the bleed.

#### **Non text area:**

The **bleed area** should be 3mm from the edge of the finished document. Any text, image, background which is at the edge of your background should be extended into the **bleed area**. This will avoid any white edges. The **bleed area** will be trimmed off, so anything you wish to show in your print, must not be in the bleed.

#### **Trim line:**

This is where the print will be trimmed off from. Anything placed outside will not be part of the final print
