

CONTAINERISED SYSTEMS

Containerised solutions for Field Joint Processing Applications

To address the needs of field-based pipe jointing and coating operations within the oil and gas sector, Radyne has designed and developed a range of portable containerised mobile induction heating systems.

A fully containerised system housing two 450TC3 power supplies and dual water chiller systems, the container is fully air conditioned and with its own lighting.

A change over switch is sited between the two Inverters to enable selection of either unit – with the main objective being able to bring the back-up unit on line in the event of a failure of the other Inverter.

Built to the offshore standard DNV2.7-1.

The container can be built in two sizes, a 20ft housing two systems or a 10ft housing a single system.

20ft container - 2x 450 TC3 inverters.
(One in operation and one back-up)

Chiller units: 2 x 90kW chillers.

(One in operation and one back-up)

Remote switching between running and back-up units via remote controls.

10ft container - 1x450 TC3 inverter.

Water cooler via water to water heat exchanger unit.
