MINIMISE THE CHANCES OF YOUR PUMPS FREEZING THIS WINTER.

Ensure your pumps are ready for the harsh winter weather and avoid costly downtime by following the six simple tips below:

1. Empty all pipelines of water if possible
2. If possible drain your pump using the drain plug (should the pump have one)
3. Insulate your pumps; wrap them in lagging or insulation

4. If possible, situate the pumps inside an enclosure or 'pump room'
5. If your pumps are inside an enclosure or room install a heater
6. For air powered pumps, ensure the air exhaust pipe discharges into a warm environment.

**With winter now upon us, it is the ideal time to service your pumps.
Don't get caught out this winter!**
