## Thermostatic Control Valve

B Valve

### Typical applications

- Lubricating oil temperature control
- Jacket water high temperature (HT)
- Secondary water low temperature (LT)
- Heat recovery
- Water saving applications
- Boiler inlet temperature control
- Co-generation, cooling towers

### Key benefits

- No external power source required - simple, low cost installation
- No user setting needed - 'fit and forget' solution
- Small number of parts - simple maintenance and low cost of ownership
- Robust design capable of high vibration and shock applications

# Operation

Note: Typical for sliding valve type elements

The temperature control power is created by the expansion of a wax/copper mixture which is highly sensitive to temperature changes.

Large forces are created by the warming/ expansion of the mixture which in turn acts upon the sliding valve, thus regulating the flow.

The diagram opposite shows the valve actuation in diverting mode at start and cooling positions.

During operation the sliding valve constantly modulates for accurate temperature control.

The reliable rugged construction provides a unit sensitive to temperature variations, not easily disturbed by pressure changes and sudden surges and maintains stable temperatures over a wide range of operating conditions.

# Applications

## Diverting applications

## Mixing applications

## Boiler return applications

## Water saving applications

Valve as shown maintains minimum flow through cooler to conserve water, requires internal leak hole to permit small flow for sensing.

# Specification

<b>Flow rate</b>	10 - 450m <sup>3</sup> /hr	
<b>Body materials</b>	Aluminium (BS: 1490 LM25TF)	For light weight
	Bronze (BS: 1400 LG2)	For seawater, shock resistance and low magnetic permeability
	Cast iron (BS: 1452 250)	For fresh water and lubricating oils
	Ductile iron (BS: 2789 420/12)	High performance iron
	Steel (BS: 3100 A1)	For high strength/pressure ratings
	Stainless steel (BS: 3100 316C16F)	Corrosive and special applications
<b>Seal materials</b>	Nitrile	
	Viton	
	Neoprene	
	Ethylene and propylene rubber	
<b>Mounting position</b>	Any orientation	
<b>Ports</b>	Below nominal temperature	Ports A and B connected
	Above nominal temperature	Ports A and C connected
<b>Port connections</b>	Screwed	40 & 50mm (1½" & 2") BSP.PL or NPT
	Flanged	50 - 200mm (2" - 8") to most DIN, ANSI, JIS and other standards
<b>Valve sizes (nominal bore)</b>	40, 50, 65, 80, 100, 125, 150 & 200mm (1½", 2", 2½", 3", 4", 5", 6" & 8")	
<b>Control temperatures</b>	See element characteristics table	

# Accreditations

---

PED

1½" to 6" inclusive suitable for Group 1 & Group 2 liquids. 8" Suitable for Group 2 liquids only. (Ensure materials are compatible)

ATEX

II 2 G X

Complies with all relevant EU directives

---

# Temperature settings

---

A wide selection of temperatures are available. Follow the equipment manufacturers' guidelines for oil systems and for specific operating temperatures of cooling/heating systems.

In general the temperature quoted is the nominal operating temperature in diverting mode on water systems.

For long life AMOT valves should not be operated continuously at temperatures in excess of their maximum continuous rating. If this condition is anticipated then consult AMOT for suitable alternatives.

For mixing and oil circuits the temperature may be 1 to 2°C higher due to flow, viscosity and other system parameters.

---

# Leakholes

---

Leakholes can be drilled to allow fluid between ports B and C:

1. To allow small flows to cooler during start up which slows down warm up cycle.
2. To allow small flows to maintain some flow through cooler in order to prevent condensation or, in extreme cases, freezing. In applications where additives are not or cannot be used.

In applications where a valve is used as 2-way, with port 'B' blocked and when the circuit is cold and the valve closed, a leakhole is necessary to ensure small flow in order to detect a temperature change in the system.

# Manual override option

BM type valves are fitted with a manual override which allows a progressive opening of port A to C.

Manual override is often a requirement for marine applications.

In automatic mode the valve will control the temperature automatically, but flipping the manual override lever on top of the valve will cause the element to move toward its hot (extended) position, regardless of temperature. Each element assembly has its own Manual Override.

Manual Override should only be used in case of an emergency or element failure.

# Valve characteristics

## Pressure drop

AMOT thermostatic valves are designed to produce minimal pressure drop.

The normal recommendation in sizing AMOT thermostatic valves is to select a pressure drop between 0.14 and 0.5 bar (2 and 7 PSI).

Size	♦	♦	♦	♦	♦	♦
<b>1 1/2</b>	8	12	16	20	24	30
<b>2</b>	10	15	20	25	30	35
<b>2 1/2</b>	19	28	37	46	55	64
<b>3</b>	20	30	40	50	60	70
<b>3 3/4</b>	28	41	55	69	84	97
<b>4</b>	40	60	80	100	120	140
<b>5</b>	60	90	120	150	180	210
<b>6</b>	90	135	180	225	270	315
<b>8</b>	135	195	260	320	390	450

Flowrate m<sup>3</sup>/hr - water

## Flow coefficient

AMOT valve flow coefficient (calculated)		
Size	Kv	Cv
1½ B	36	42
2 B	44	51
2½ B	79	81
3 B	87	101
3¾ B	121	140
4 B	176	203
5 B	263	304
6 B	394	456
8 B	571	660

A Cv is the valve's flow coefficient (Kv is the metric coefficient). It is defined as the number of US gallons per minute of room temperature water which will flow through the valve with a pressure drop of 1 PSI across the valve (see table).

# Specification check list

Use the tables below to select the unique specification of your B Valve.

Please select one characteristic from each section. Each characteristic is associated with a code that you will need to state when ordering.

Valve size mm (inches)	Number of elements	Code	✓
40 (1½")	1	1½	
50 (2")	1	2	
65 (2½")	2	2½	
80 (3")	2	3	
80 (3")	3	33	
100 (4")	4	4	
125 (5")	6	5	
150 (6")	9	6	
200 (8")	16	8	

Type	Code	✓
1½" and 2" screwed connections	BO	
2½" to 8" flanged	BO	
Flanged 'T' configuration (2" only)	BC	
Flanged 'F' configuration (2" only)	BF	
Manual override (2" to 8")	BR	
Screwed high pressure (2" only) (cast iron)	BH	
Screwed/screw retained sleeves (2" only) (cast iron)	BG	

Housing material	Code	✓
Aluminium (not 8 and 33)	A	
Bronze (not 33)	B	
Cast iron	C*	
Ductile iron	D	
Steel (2", 2½", 3" and 4" only)	S	
316 stainless steel (2", 2½", 3" only)	R	

Port connection	Code	✓
Flanged PN6	A	
Flanged PN10	B	
Flanged PN16	C	
Flanged BS:10 (table D)	D	
Flanged BS:10 (table E)	E
