End of press lamp on Komori LS29

Benford's new **ecoUV**<sup>TM</sup> curing systems open up a whole new range of benefits to printers that were only available with a full UV press.

Control cabinet

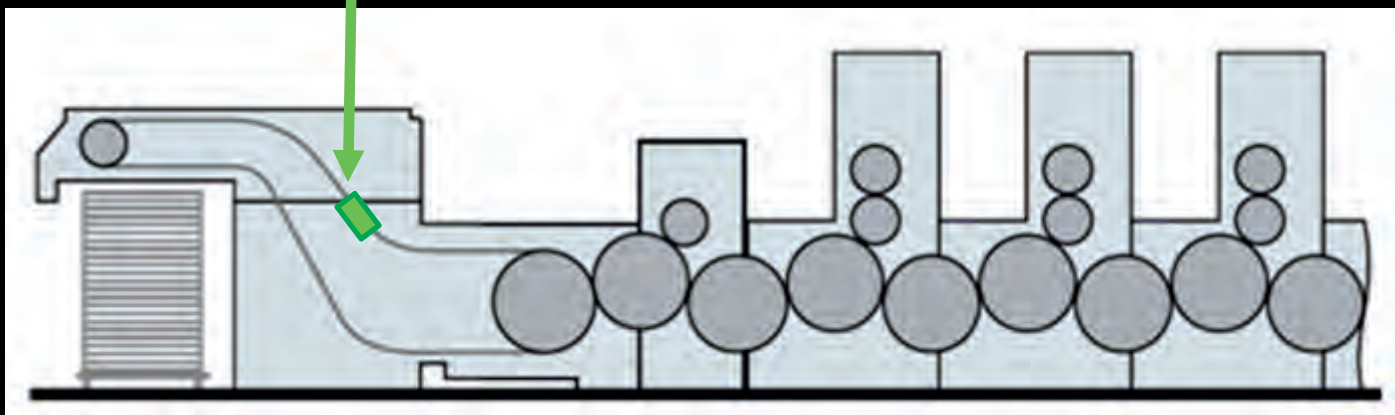

By using only one UV lamp and special UV inks, the benefits are as follows:

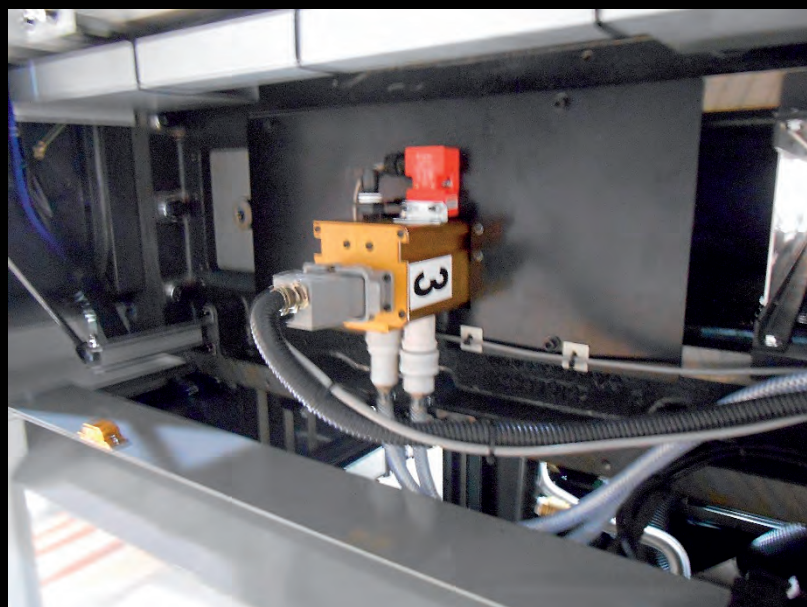

- Low cost outlay
- Low power consumption – one quarter compared to standard UV.
- No more powder required.
- The sheets are 100% dried at high speeds and ready to go.
- Multiple substrates can now be printed on.
- No stock deformation as very little heat is produced.
- No dry back.
- Super high gloss coatings and dramatic colours are now available.

**BENFORD**

Benford's new system incorporates all press fans and lamp box cooling inside the cabinet. This significantly reduces the floor space required by the system.
