

# Retractable and Fixed Seating

## RETRACTABLE SEATING AND BENCHES

Retractable seating systems with individual fold-down chairs have been installed extensively in Schools, Colleges, Universities and Professional Theatres, also upholstered bench seating.

The design of the seating system allows maximum seating capacity and an economic solution to seating projects. Seating units are manually operated but can be motorised for ease of operation.

All retractable seating systems can be finished with a wide range of fabrics and carpets to meet the most demanding requirements. Options include:

- Demountable handrails for front, rear and side as required
- Self-storing rails (sides only) for ease of operation and storage
- Aisle lighting
- Fully carpeted decks with deck end trims
- Integral electric power operation with detachable controller
- Hydraulic lifting trucks (for use with portable units only)
- Demountable side curtains
- Fixed back panels to the rear of the seating unit
- Seat numbers and row letters

## AUDITORIUM SEATING

The fully upholstered seat base can have an exposed polished or painted plywood panel on the underside of the seat base for added durability. The standard fully upholstered seat back, with lumbar support, can have an exposed polished or painted plywood panel on the outside of the back. The seats can be provided with or without armrests. Should armrests be required, these can either be solid beech timber, polished or painted finish, or upholstered in the selected fabric.

## LECTURE THEATRE SEATING

The lecture theatre seats can be tailored to suit individual design requirements, both in terms of dimensions and finishes. The underside of the seat can be upholstered, exposed painted, polished or veneered plywood panel. The same detail can also be reflected on the outside of the seat back. Various types of writing ledge are available.

Alternative lecture theatre seats can be installed in locations where a higher degree of comfort is required. The seat has a deeper seat base and lumbar support in the backrest, along with other design options.

## FIXED TIERED STRUCTURES

Modular construction permits ease of installation on site. This feature, when complemented with our in-house carpeting and seating installation operation, allows a typical classroom to be converted into a tiered lecture theatre, within a matter of a few days.

The fixed tiered structures can be manufactured to any riser and tread dimensions that may be specified and they can also be constructed in a straight or curved configuration.

## STACKABLE LOOSE SEATING

Available in various styles and colours with trollies.
