

## NEW from Quest Nutra Pharma

Quest Vitamins are proud to announce the launch of their brand new liquid range. Our Liquids are manufactured 100% in-house with the finest, hand picked ingredients and they are manufactured to the highest standards.

The Once a Day Liquid products will be available to order online shortly

The First two products in our range are;

ONCE A DAY RANGE

### ONCE A DAY IRON PLUS LIQUID

For periods of increased iron requirements, helps reduce tiredness and fatigue.

- Synergistic formula providing iron with 14 supporting nutrients
- Ideal for use during menstruation, pregnancy and when experiencing fatigue
- Gentle on the stomach, with malt extract and honey

#### DESCRIPTION

A liquid food supplement with iron, vitamin C, B vitamins and supporting minerals in a base of malt extract and honey. Once a Day Iron Plus liquid contains a range of supporting nutrients including vitamin C, B vitamins and minerals and is suited for use during periods of increased iron requirement, such as during menstruation or pregnancy. Women of child bearing age have a higher risk of low iron levels due to blood loss during the menstrual cycle. Iron is important to normal cognitive development of children. Iron supplementation is also recommended to rectify and prevent iron deficiency anaemia in pregnancy.

ONCE A DAY RANGE

### ONCE A DAY INFANT MULTI LIQUID

To support a child's nutritional requirements during early years.

- Synergistic formula providing vitamins, minerals and DHA
- Comprehensive gentle formula for babies and infants
- Provides key nutrients to support the nutritional requirements of a child during their early development years
- Help to support immune function and bone, eye and brain development

#### DESCRIPTION

Once a Day Infant Multi + DHA liquid contains a blend of 14 vitamins and minerals along with DHA (Docosahexaenoic acid) an essential fatty acid. This synergistic formula is designed to support a child's nutritional requirements during their early years. It provides vitamin D which is needed for the normal growth and development of bone in children and to support immune function. Docosahexaenoic acid (DHA) intake contributes to the normal visual and brain development of infants especially during the first 12 months of age. Iron contributes to normal cognitive development of children and to the production of haemoglobin and formation of red blood cells and normal oxygen transport to tissues and cells in the body. Vitamin C increases iron absorption and riboflavin (B2) contributes to the normal metabolism of iron in the body.

UK Department of Health Recommends that all babies aged from six months onwards should be given a supplement containing vitamins A, C and D\*

\*With the exception of babies consuming 500ml or more of infant formula as this already has vitamins added to it.
