## **News Release**

### **The New AFT100 with reduced transport width for even safer road use**

**The latest AFT 100 Trencher which is now fitted with a new Hydraulic Lift Pipe Reel 'inboard' to keep the whole unit within the width of the tractor, making road travel much safer.**

A tough trencher for tough digging conditions; the latest AFT 100 is suitable for tractors from 65 to 140hp (48-105kW), with creeper gearbox.

The AFT 100 Trencher is capable of digging to a depth of 1.6 metres deep and 300mm wide. Accurate depth and grade of trench is achieved with the use of our Laser System.

The AFT 100 trencher is designed to create efficient land drainage preventing the soil from becoming saturated. This allows crops to flourish, obtaining the right level of moisture to encourage good root development and natural growth. At the same time the land remains accessible for machines at all times. It is the most economical way, long term to improve crop yields.

It is the ideal tool to quickly install sophisticated drainage systems, as and when required. Very suitable for contracting in your local area: if you have a drainage problem, your neighbour probably has them as well.
