PROJECT MANAGEMENT

With IT essential to today's organisation, the business risk in even routine technology projects can be substantial. Our PRINCE2 qualified project managers reduce risk by delivering complex projects to agreed requirements and timescales.

When projects are delayed or run over budget, the business and reputational costs of missed deadlines or late delivery can be enormous. It isn't just the complex one-off deployments, but even the routine upgrades that carry risk.

EnablesIT's team of skilled, experienced and PRINCE2 qualified project managers run a wide range of projects for customers. From a server migration (or consolidation) to the deployment of a private cloud platform, we deliver complex projects to agreed timescales, reducing risk and improving outcomes for your organisation. We also specialise in managing projects within regulated environments. Of course, we always provide regular reports, so you know where things are.

Our project managers use recognised methodologies to identify and manage project risk, critical success factors and constraints. They provide control and regular reporting to ensure projects remain on track.

Our Project Management team specialises in:

- Private and public cloud platform migrations
- Data centre design and build projects
- Desktop rollouts

- Network & cabling upgrades
- Virtualisation and rationalisation
- Storage, data replication and back up

KEY FEATURES OF PROJECT MANAGEMENT INCLUDE:

- Highly experienced, PRINCE2 qualified project managers
- Reduced risk and improved project outcomes
- Deployed on all enablesIT projects and available as a separate service for third-party or internal projects
- Project coordination

- Work with enablesIT's and third party consultants, architects and engineers
- Off-site pre-staged configuration and testing
- On-site implementation and handover

BENEFITS:

- Deliver IT projects and upgrades on time and on budget
- Reduce business and reputational risk with recognised project management methodology
- Improve communication and stakeholder management with regular project reporting
- Anticipate issues and prevent major problems with regular project reviews

- Protect the integrity and reliability of your communications and data systems through robust, rigorous project control
- Enjoy peace of mind with a clearly managed project plan
- Integrate with your own project controls and management reporting
- Available as a stand-alone service or to augment your own team
