

TESTIMONIAL

THE PRODUCT

Comms365 4G Solutions are ideal for SME offices that need an immediate Business Broadband solution due to the problems caused by ADSL/FTTC installation delays, for recovery from service outages, or to manage disaster recovery.

We can also supply you with a short-term Fixed Public IP 4G SIM for use in your own equipment. Alternatively you can purchase your hardware directly from us.

DISASTER RECOVERY SOLUTION FOR STIRLING MEDICAL - ENABLING INSTANT INTERNET CONNECTIVITY WHILST WAITING FOR A FIBRE BROADBAND CONNECTION TO BE INSTALLED.

Prior to implementing a new solution, Stirling Medical had 2Mb copper broadband in place, which didn't provide enough bandwidth to support its business and two further offices. Having waited an initial six months for a fibre line, Stirling Medical engaged with Comms365, and its 4G Business Broadband Rental Service, went live within a day.

Noel Morren, Sales Development at Stirling Medical comments: "As we grew as a business, and with the internet being the lifeline to our day to day operations, it soon became apparent that we really needed a quicker and more reliable connection. We couldn't however afford to wait for fibre to be installed.

"From day one, Comms365 worked closely with us to ensure it provided the right solution for our needs. The flexibility it offered around our contract and its speed of response were very impressive. Other providers took weeks to even come back to us following our initial enquiry. Crucially, Comms365 provided us with a main day to day contact and we had peace of mind that there was a dedicated team ready to support us should we have needed it. If a 4G broadband rental option hadn't have been available, the wait for fibre optic broadband would have not only impacted heavily on us, but also our customers."

Provided as a managed service, Comms365's Continuum provided Stirling Medical with a 4G monthly data bundle of 128GB per month.
