

Black Beauty™ Dense Shade

Premium Grass Seed Mixture

Black Beauty Dense Shade is a premium grass seed mixture specially designed to grow in medium to densely shaded lawn areas. It provides an attractive, dark-green, deeply-rooted lawn that competes quite well against trees with thick canopies and large roots. Black Beauty Dense Shade contains naturally insect and disease resistant varieties that should germinate in 14 - 21 days.

Black Beauty varieties contain a waxy leaf coating to preserve moisture, have a uniform growth habit, and are grown by leading sod growers across the United States.

- Grows in shady areas and dry soils where other mixtures have failed
- Combines many grass types for species diversity with naturally insect resistant grass
