

Fairman Chemists Limited have several outlets that were using traditional till systems, they became interested in a more modern EPOS solution that would enable them to get a VAT returns report for all outlets.

“RePOS deals with multiple outlets allowing our business to be flexible, reduce costs, improve accuracy, and build reliability whilst providing us with total control from one central application.

The staff are now using the system, stock levels can be seen, and controlled and the performance of products can be seen by all of the outlets.

One of the main attractions for us is the flexibility of RePOS, it has given us the ability to personally add more users to or open up new outlets. The ID's for user accounts at specific outlets are centrally managed, as are the function modules which we can switch on and off quickly by user group.

Price updates, product changes, and stock adjustments are all centrally managed and deployed to all the RePOS tills at scheduled times.

The RePOS solution has given us the VAT returns that we required as well as control over our employees, the reporting options have given us insights into the business that I have never had before.

It has helped our head office who can see all the live transactions coming into the database during the day. Being able to see the balance of cash in each till, and how much cash is held overnight in the safes has greatly helped the head office functions.

Rombus allowed our staff to become accustomed to RePOS by offering us a demo trial period and also gave us training as well as support.

As a result of the trial, we are looking forward to deploying the system in our other branches.”

- Chris Holmes (Fairman Chemists Limited)
