Press Release

New Self-propelled Trencher from AFT opens the way for easy small-scale trenching projects

Landscapers will be delighted at the introduction of the AFTraction from AFT Trenchers. This new self-propelled trencher has been designed in response to a call for a simple to use, pedestrianised trencher for small-scale projects. The AFTraction is without doubt the ideal solution for installing trenches for short drainage and irrigation lines, cable laying and installing curb stones.

Very easy to operate with all the controls within the grasp of the operator standing on the rear footplate, the 13hp Honda 390 GX engine powers the AFTraction to provide an easy method of installing up to 6" (16cm) wide trenches down to a depth of 24" (60cm).

The hydraulic depth controls for the digging boom with chain and trench cleaner allow you to vary the depth with no fuss or interruption, and the chain is equipped with mixed soil blades and bullet teeth to deal with a variety of digging conditions.

Two speed settings with the flexibility of moving left and right is perfect in areas with restricted access. The machine fits easily on the back of a truck or trailer and the narrow dimensions of 59" length and 28" width will fit through gateways and along paths and walkways.

Where the footprint impact to the surface has to be considered, such as golf greens or lawned areas in parks, the unique, wide rubber tracks displace the 280kg weight evenly, minimising surface disruption and compaction.

Landscape contractors, greenkeepers and groundsmen will quickly find the AFTraction becomes an essential part of their turf and grounds maintenance regime.
