

HIGHEST PRECISION NEEDS THE BEST PROTECTION

The AirWave ESD Series

With the high-performance ESD HP air cushion series, the FLOETER development team presents a new generation of ESD films in the thinnest and most cost efficient version, while not compromising ESD values at any time. With $10^9 \Omega$, FLOETER ESD film offers the best protection for shipping.

www.floeter.com

AirWave ESD films independent of film thickness – from 20 to 12 μ

FLOETER breaks new ground with the ESD HP air cushions. Until now, ESD properties under $10^{10} \Omega$ were only possible based on heavy films with higher volume and a high antistatic masterbatch dosing.

With the LQC-Nano technology of FLOETER, a long lasting and humidity independent ESD protection is now achieved. Today we can offer the best, cheapest and resource-efficient ESD protection, we ever produced.

- Film rolls from 200 to 3000 m
- Film gauge from 12 to 20 μ
- Weight load from 30 to 300 kg
- Filler and wrapper
- 210 - 840 mm wide
- 12 different patterns
- Amine-free and non corrosive
- Works great with AirWave1, AirWave2 or AirBoy nano3

Use as direct wrapper or as void fill
