

Natural daylight

A good living environment is becoming increasingly important and determines the quality of life for humans and animals alike. Having adequate natural daylight in a living or working environment is a crucial factor. As a daylight professional, Techcomlight offer specialist advice regarding the provision of natural daylight into both living and working environments

Our services

Daylight advice & training

The provision of adequate daylight begins with a detailed daylight calculation plan. Techcomlight provides customised advice for any kind of space and we are able to calculate the end result before any installation work has even started.

Installation & customisation

Techcomlight's specialist installers can complete all necessary installation works providing a turn-key daylight solution. We also welcome bespoke or customised projects.

BIM & 3D design

Techcomlight offers support and coordination when implementing daylight into your BIM model.

Inspection & maintenance

Techcomlight can provide a technical inspection of installed daylight systems complete with a full inspection report.
