## About Alexandra

Alexandra initially started in 1986 as a metal fabrication workshop serving the needs of the perimeter security market and offering on-site welding facilities. With many of our customers facing the demands of unrealistic lead times, we quickly identified a need in the market of a supplier that could not only offer the experience of their own workshops, but would also carry sufficient levels of stock on a complete spectrum of perimeter protection and safety products to meet these demands.

### Mission Statement

To provide our employees an honest working environment based on integrity that will form a reputation to our customers of providing excellent product knowledge together with quality and service.

### Vision

To become recognised nationally as the best supplier of perimeter safety and security systems.

## What We Do

Specialist suppliers of high quality perimeter and roof edge protection systems. With over 40 years experience in the market place we have built up an enviable reputation for service, reliability and advice.

We work extensively in a number of market sectors including; construction companies, railway organisations, local authorities, utilities and are major suppliers to clients who manage commercial and domestic property.

Our product range including; Security Fencing, Armco Barrier, Posts/Bollards, Traffic control, key clamp and anti-climb, provides our customers all they need to suit almost every application.

Our highly trained staff will listen to your requirements and accommodate any specific request you may have. Based in Kent, 8 miles from the M25, with our 'Next Day' pallet delivery service, we're well placed to serve the UK market.

## Why Choose Us

Our vision is to become recognised nationally as the best supplier of perimeter safety and security systems. As a result Alexandra carry a high volume of stock on a complete range of products that can be found on our website, and have the unique advantage and flexibility of being able to offer our own manufacturing and workshop facilities.

## Our Technology

We now have our own in-house research and development team and have recently re-invested in state of the art computer aided design software to offer a first rate service from conception through to completion and ensure our clients visions become realities. All our staff are trained to listen to your requirements and to offer product knowledge giving you the confidence that our product is right for your application, your problems become ours and we provide the solutions.

Smaller items and pallet deliveries are despatched on an overnight courier, if required for next day delivery they must be ordered before midday.

## Fencing

Our range of fencing systems are designed to keep your area safe, as well as offer excellent perimeter protection. Our products include:

**ProFence** - Using unique cold roll forming process, ProFence is the first complete cold rolled security fencing system. The system is lighter, stronger and more economical than conventional palisade fencing.

**Protek Mesh Fencing** - Our Protek mesh fencing range delivers a high quality alternative to your fencing needs. A number of different Protek products are available including Protek 1000, 2000, and 3000, along with Protek Twinwire, Protek Rebound and Protek 358 We have everything you need to keep your perimeter secure.

A Number of different Fencing products are also available including Bow Top and Pedestrian Guardrail, Contact us for fences made to specification

- ▶ QuickClamp.
- ▶ Safety Barrier.
- ▶ Traffic Control.

## Anti-Climb

Our range of anti-climb products are designed to keep your area safe as well as offer excellent perimeter protection for your property. Our products include:

**Rotating Anti-Climb** - This product incorporates pairs of three point vanes assembled around a central fixed axis to present a freely rotating anti-scale obstacle. Used in areas where vandalism or forced entry is a serious threat the system protects whilst maintaining a uniform neat appearance.

**Razor wire** - Razor wire is manufactured from galvanised steel strip, diestamped to create razor sharp barbs at regular intervals and formed around a galvanised, high tensile, steel core wire.

**Wall Spike** - This simple yet effective anti-climb barrier can be mounted on tops of walls, fences and flat roofs, the strip is flexible which allows it to follow the contour of the surface it is being fixed to.

**Saw tooth** - The saw tooth strip is supplied as 3.00mm thick bare mild steel it is ideal for welding to the top of gates and fencing panels prior to galvanising.

▶ QuickClamp.

▶ Safety Barrier.

▶ Traffic Control.

## QuickClamp

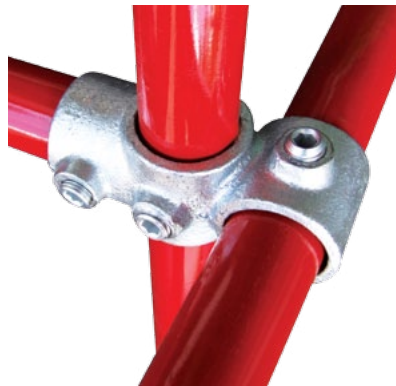

Our extensive product range gives you everything you need to create the most efficient handrail and barrier solutions possible. They include:

**QuickClamp** - A versatile, multi-purpose system using malleable cast iron fittings. The flexibility of the system allows complex structures to be assembled in a quick and effective manner. Whilst used primarily to construct safety handrail and balustrades, QuickClamp also has many other uses such as providing support structure for canopies carports and can provide framework for chainlink, mesh or ball stop fencing.

**RoofClamp** - Has been designed to offer a non-penetrative roof edge protection system. Used specifically for the safety of employees and contractors working on or gaining access via a flat roof at height. The system has been designed to support a person leaning on the guardrail or to provide a hand hold when walking beside. It will stop a person who is walking or falling towards the protective rail.

**DDAClamp** - A complete system that has been specifically designed to help compliance with the Disability Discrimination Act (DDA) and the building Regulations Part M:2004.

- ▶ Anti-Climb.
- ▶ QuickClamp.
- ▶ Safety Barrier.
- ▶ Traffic Control.

## Safety Barrier

Our Range of safety barrier systems includes:

Untensioned corrugated/Armco safety barrier - This barrier is widely used in installations such as industrial estates, car parks and warehouses.

Open Box Beam - Open box beam safety barrier provides an alternative to the standard corrugated system and is particularly suitable where a stronger safety barrier is required. Beams are supported on the same posts as used with the corrugated system but the fixing is achieved with a clamp plate and joints are secured with fish plates. This means that the post centers are fully variable if required and can be set at closer centers for heavy duty applications.

Safety Barrier Posts - steel posts in 'z' and 'l' beam section have been the traditional and time served choice for a number of years and are suitable for commercial areas, car parks and industrial parks etc. where frequent contact is likely, concreted in posts should be used and base plated posts in warehouses and for light duty requirements. All posts are suitable for non-highway use.

- ▶ Anti-Climb.
- ▶ QuickClamp.
- ▶ Safety Barrier.
- ▶ Traffic Control.

## Traffic Control

Our range of traffic control products are designed to keep your area safe as well as offer excellent perimeter protection. Our products include:

**Speed Restrictors** - The installation of speed restrictors to introduce site traffic calming measures is a well established and proven method which is quick and simple to install.

**Flow Plates** - The flow plates are designed to be installed across a roadway or entry/exit allowing traffic to pass in one direction only. By encouraging one way traffic flow, site safety is maintained for both vehicles and pedestrians.

**Rising Arm Barriers** - Our manually operated barrier is used mainly for low use entrances to private car parks and offices and as a cost effective method of restricting traffic to certain areas.

**Swing gate barriers** - This gate is based on a rigid rectangular form complete with struts to strengthen the frame and make it suitable for continuous heavy use.

We also have a range of Automatic Rising arm barriers, pedestrian guardrail, hoop barriers bicycle shelters and height restrictors
