

MAYRISE STREET WORKS

Overview

As a founding member of the EToN Developers Group, Yotta have been offering Street Works, Permits and Lane Rental software solutions since the late 80's. The latest Mayrise Street Works system delivers you a complete coordination and management solution which is fully EToN compliant, meeting the requirements of both Traffic Management Act (TMA) and New Roads and Street Works Act (NRSWA). Whether you are a Street/Permit Authority or Traffic Manager we have the tools for you to effectively manage your street works register, enabling operational efficiency and an appropriate, transparent service on the streets.

Key Features

EToN6

Mayrise Street Works is written to the latest specification agreed by the EToN Developers Group, including new changes to Inspection categories and Notices.

Intuitive Interface

The user interface is designed specifically around Street Works terminology and business processes, not our database, to ensure its ease of use, minimising staff training and risk of errors. Our unique noticing wizard walks you through the workflow for noticing, simplifying the process at every stage ensuring EToN compliance.

NSG

The Mayrise Street Works system fully supports the import/export of National Street Gazetteer (NSG) data using intuitive tools, comprehensive error reporting and ODD publishing. It also allows for gazetteer maintenance and the creation of Associated Street Data (ASD) in the latest Geoplace approved formats.

Mapping

Fully integrated mapping allows for a complete visual representation of your street works register, to help you identify and plot potentially conflicting works easily.

Works Coordination

Our unique Confirm Imports module displays incoming notices as they are received, highlighting conflicts using our integrated mapping and Gantt Chart tools, noticing errors and warnings, giving the co-ordinator the full picture of potential network disruption.

Manage Register

Tools provide a logical approach to managing the works register. Identify potential overstay (Section 74), Fixed Penalty Notices (FPNs), and generate inspections in line with the Inspection Code of Practice and manage your operatives in the field.

Permitting & Lane Rental

Utilising a range of easy-to-use tools including configurable Permit Checks, an integrated visual Knowledge Base and Charging Calculator, both Permit and Lane Rental schemes can be comprehensively managed in full compliance with the Traffic Management Act 2004 (TMA).

Reporting

A complete set of reports producing Key Performance Indicators and scorecards in visual formats. A powerful query tool ensures you can create custom reports both on screen and by exporting to common formats, including ESRI and MapInfo.

Attachments

Create attachments to works comments, notices, FPNs, Traffic signal applications to help ensure relevant information is passed between you and the Promoter.

Integration

A comprehensive range of tools and APIs allows integration with 3rd party systems and the publishing of Street Works register data to the internet.

Mobile

Mayrise Street Works is available with a mobile interface to help you further improve efficiency and make life easier for your inspectors. Allow inspections to be undertaken with real-time data, helping manage works efficiently, transparently and robustly.

Online

Mayrise Street Works can be delivered by the Mayrise Online hosted service. Reduce the burden on your IT by using our secure hosting service and get the best in application performance, support, managed updates and monitoring.

Support

We provide dedicated ITIL aligned support, with a team of knowledgeable staff here to answer your queries and ensure you get the most from your Street Works solution. Yotta are providers of CPD certified training.

Benefits

So, you're an Inspector...

Become more productive and efficient with Mayrise Street Works. Plan your inspection regime efficiently with our notice management tools, maximising inspections where there are potential overstays and at the end of reinstatement warranty periods. Use the mobile software to speed up inspections allowing data to be input directly into the database whilst on site and increase the number of inspections you can undertake in a day and minimise paperwork.

So, you're a Manager...

Plan works on your network more effectively and efficiently and help reduce disruption on the network. Simple and visual planning tools alongside integrated mapping will help you see and understand potential conflicts and ensure you keep disruption to a minimum. Ensure inspection regimes are in place to effectively manage works and ensure Works Promoters are in compliance with their notices. Produce clear and visual reports across your network to understand performance and historic trends.

So, you're a Director...

Provide the best level of service across your network by minimising disruption from Street Works. Manage your risk, using software which is compliant to the TMA and EToN specification will help your department meet the legislative requirements for issuing notices and inspecting appropriately. Introduce Permitting schemes to gain increased control of your road network.

Street Works in Use

West Berkshire Council

Mobile Street works management software from Yotta is helping West Berkshire Council achieve savings through improved working practices. Using rugged all-in-one handheld computers, Street Works Inspectors can work independently in the field; retrieving up to date street works information, completing and filing inspection reports and accessing detailed street level mapping. The Mayrise powered devices will also help the Council comply with new legislation.

"Prior to the introduction of the Mayrise mobile system the first port of call each day for our Street Works Inspectors was the office," commented Neil Ainsworth, Principal Engineer for Street Works at West Berkshire Council. "Here they would collect their daily schedule together with blank inspection reports and possibly some pre-printed maps. Now all this information is available at any time at the touch of a button!"

Using the Mayrise centralised system and integrated mobile modules, Street Works Inspectors working in the field have up to the minute access to the same information as office based

colleagues. The handheld devices can interrogate the Street Works Register to fetch live information about specific works, access street level mapping through Mayrise MapNow and communicate with the relevant statutory undertaker if required. In addition, the menu driven inspection regime allows automatic transmission of data back to the office where the centralised Mayrise Street Works software is updated.
