

Using Masterbatch?

Not a problem

You can easily retrofit our PiB Pumpers to your extruder and start saving money right away. Not only is the cost of liquid PIB far less than masterbatch, but you save on power too as you are converting less polymer by adding liquid PIB.

Just keep liquid PIB in stock

If you wish to manufacture films with different 'tack' levels the PiB Pumper has a manual adjustment which will deliver a higher or lower % of PIB into the product.

This eliminates the need to stock expensive different grades of masterbatch for production of different films.
