Key problems?

Do you know where all your keys are?

Do you know who the last person in your property was, and how long they stayed for?

Keys are a simple device, yet they can cause many problems if they are not managed effectively, including:

- Tracking their whereabouts. This can prove to be timely, costly and create management problems when organising daily activities
- Waiting for keys to be returned or travelling to pick them up
- Replacing lost or stolen keys, which can incur increased expense and security risks
- Unauthorised access to secure data
- Authorised access within unauthorised times

HOW WOULD YOU LIKE THIS...

...TO LOOK LIKE THIS?

ONE KEY FOR ALL LOCKS

eMAKS = key solutions

Exclusive to Orbis, eMAKS (Electronically Managed Access Key Systems) provide a revolutionary one key for all locks solution that will also operate alarms.

How does eMAKS work?

Each key is electronically encrypted so that when used with eMAKS locks you can control what locks open and when. This can be managed through a simple phone call.

The eMAKS solution involves:

- **SIMPLE ACTIVATION IN MINUTES** To program a key just call the Orbis 24/7 Response Centre who will update the software so that the authorisation ports are ready for use in minutes. The key can then be activated simply and quickly via various types of authorisation ports, locally via a laptop, or remotely via a PDA.
 - **TIMED ACCESS** eMAKS keys can be programmed to work within specific periods, so if you want a plumber (for example) to enter and leave between the hours of 12 and 2, then you program the key to allow access only within this time.
 - **ACCESS REPORTS** Each entry and exit to the building (whether allowed or denied) is recorded and reported via the eMAKS key. Communication works through inserting the key into the authorisation port. Each time the eMAKS key is placed in an authorisation port, access reports are transferred to the Orbis Response Centre and then reported to you.
- **ONE KEY FOR MULTIPLE LOCATIONS** One key can be programmed to work with hundreds of locks so that you can grant access to multiple locations without the need to return to the office to swap keys. This will save managers and contractors up to two hours a day, or 72 days a year (average).
 - **EASY MANAGEMENT CONTROL** The codes and access reports enable managers to have a clear picture of their properties' daily visits and how long each job takes. This allows for future planning and increased efficiency with invoicing.
 - **INCREASED SECURITY** eMAKS locks cannot be picked and eMAKS keys cannot be duplicated.
 - **NO NEED TO CHANGE THE LOCKS IF A KEY IS LOST** eMAKS keys can be de-programmed quickly by calling the Orbis 24/7 Response Centre.
 - **SIMPLE SWAP BETWEEN NORMAL AND eMAKS LOCKS** No wiring or batteries are needed so locks are completely portable. Normal locks can be replaced by eMAKS locks and key systems.

Full support 24/7

- Orbis' fully trained eMAKS Technicians ensure a smooth and easy move to the eMAKS solution is achievable.
- The Orbis 24/7 Response Centre ensures eMAKS keys and locks can be updated any time, day or night.

KEY MANAGEMENT IS JUST A CALL AWAY

Whether you'd like an eMAKS lock, door or alarm fitted, the Orbis eMAKS range suits all needs and can work with you to produce a Key and Lock Plan, to ensure that you're getting the right product for your needs.
