Grey-Green

Redgra

Grimshaw Sports is a third generation family business, specialising in the design, construction and maintenance of sports facilities. From tennis courts and multi-use-games-areas to playing fields we offer a comprehensive service.

We have been constructing sports surfaces since 1947, along with their drainage, fencing, lighting and associated footpaths, roads, car parks, club houses and sports equipment.

Our clients include national and local government, schools, universities, clubs and private individuals.

PLANNING ➤ **DESIGN** ➤ **CONSTRUCTION** ➤ **MAINTENANCE**

SPORTS EQUIPMENT ON-LINE

We like to be involved with our customers from the conception of the project.

Initial consultation and quotation is always free and without any obligation.

From the first meeting, preparation of drawings and if required, planning applications; through the various stages of construction, to landscaping and final handover, we pride ourselves on keeping the

customer informed at every stage.

We believe in using the finest materials, whichever playing surface is chosen, to ensure that the quality of the finished project is to the highest standard.

Founder member of the Sports and Play Construction Association

Polymeric Rubber

Rubber granules combined with a polyurethane binder to provide a degree of underfoot cushioning for increased comfort. This is also installed as safety surfacing.

A wide range of colours can be created either using coloured granules or spray applied finishes.

Artificial Grass

Both sand filled and sand dressed carpets, with a wide range of pile heights, are offered to provide the required playing characteristics. Alternative colours are available where two tone tennis courts are required.

Long pile 3G carpets with rubber crumb/sand infill and shock pads beneath suit the needs of sports such as football and rugby.

Natural Grass

The traditional surface for lawn tennis, croquet, bowls, football, rugby and cricket each with specific requirements; grown from seed or using cultivated turf.

Grey-Green

An excellent surface for tennis players who prefer a controlled and limited degree of slip underfoot that also reduces impact on joints such as knees and ankles. Few other tennis court constructors now have the expertise to install this long established surface.

Porous Macadam

The ubiquitous sports surface for schools, clubs and private individuals alike. Durability and rapid drainage after rain maximise the available playing time. Suitable for tennis, netball, basketball etc.

The initial black colour gradually fades to reveal the natural colour of the crushed rock aggregate. Alternatively the surface can be coloured with spray applied textured acrylic resin for enhance underfoot traction and easier line decisions.

Redgra

Pioneered in the UK by Grimshaw Sports over 50 years ago and still providing an economic porous surface for hockey, tennis, and running tracks as well as footpaths and landscape features.
