

The hotel home experience

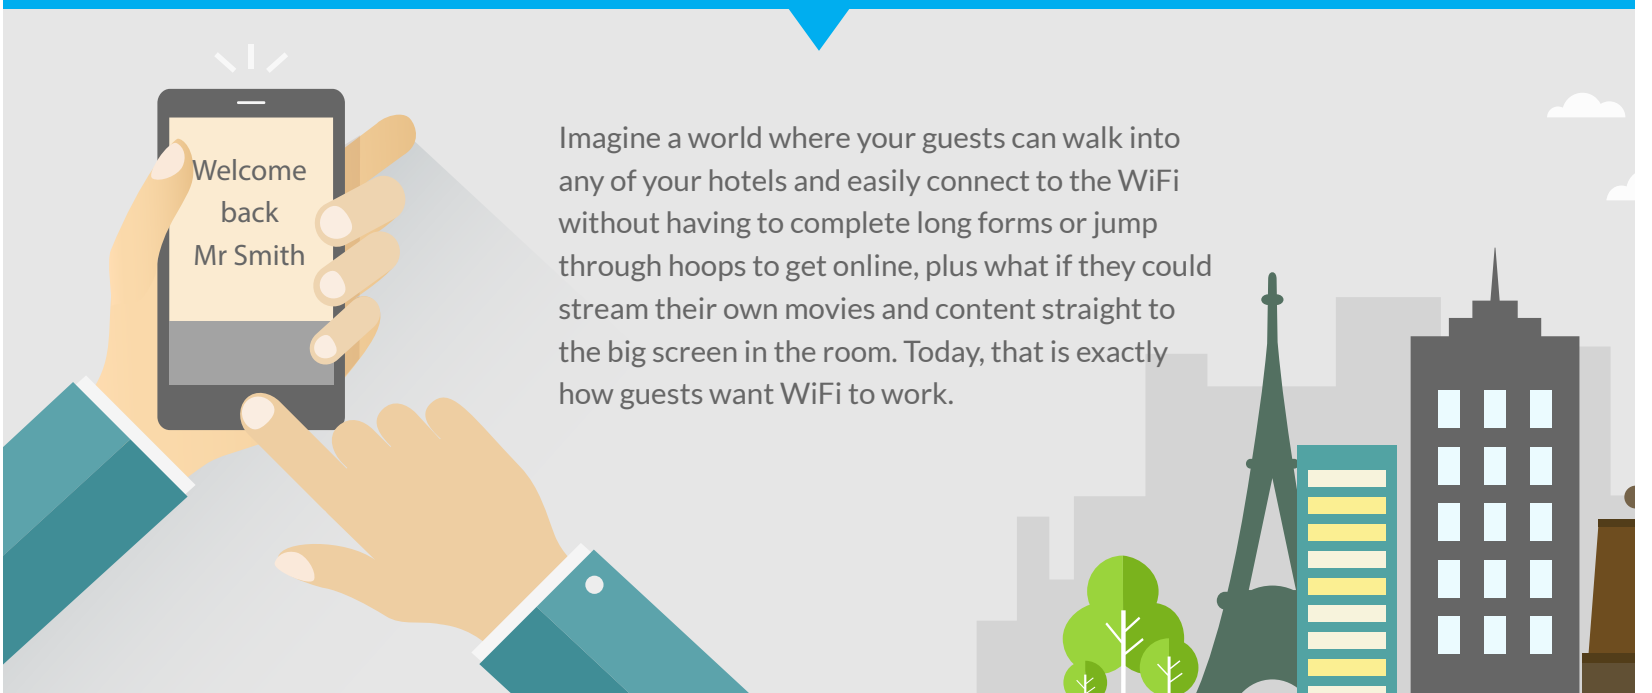

New for June 2016 -
Only available from
Airangel WiFi

MyAirangel - Satisfying Guest WiFi with a difference

Imagine a world where your guests can walk into any of your hotels and easily connect to the WiFi without having to complete long forms or jump through hoops to get online, plus what if they could stream their own movies and content straight to the big screen in the room. Today, that is exactly how guests want WiFi to work.

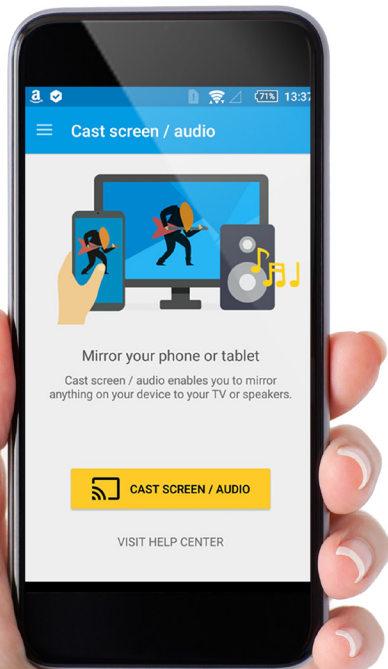

MyAirangel Personal Area Networks

Introducing the MyAirangel Hotel Home Experience

MyAirangel is a cloud-based WiFi platform that offers significantly more than a reliable connection for your guests. With MyAirangel guests are given easy access to the WiFi via their social network profiles, a short form, or by logging in just like they would at home, meaning no forms, username or passwords required.

Our latest innovation allows each guest to have their own private WiFi network, which follows them to any of your hotels where MyAirangel is installed, no matter where in the world they are. Our solution also opens up possibilities for guests to securely connect to other hotel devices that were previously unavailable on traditional guest WiFi networks.

After first login, guests can choose their own personal SSID. Once connected to the in-room WiFi, the Personal Area Network is deployed, providing the guest with the ability to interact with other hotel devices such as the smart TV. Just like at home, guests can now stream their personal content, such as movies, or their holiday snaps, to the biggest screen in the room.

Benefits for guests

- Guest have their own personal SSID no matter which of your hotels they visit
- Better in-room entertainment
- Guests would no longer need to rely on using the traditional remote control hotel TV entertainment systems
- Guests can cast their online media to the smart TV, or connect their gaming console
- They have the complete freedom and flexibility as if they were at home
- Increased satisfaction from having a better WiFi experience

Benefits for hoteliers

- Increased guest on-property value and satisfaction as guests interact with the hotel's digital services
- Can be used as a reward for regular guests or loyalty members
- Upsell opportunity to loyalty members
- Contact data can be imported into email marketing platforms via our API to trigger welcome and engagement emails
- Engage with guests outside of the Personal Area Network using Injection Jets
- Content such as video, banners surveys, and pop-up menus can be injected into the guests browser promoting hotel services or third party advertising
