Kinder

FIRES FOR LIFE

At Kinder, we know how important it is to create a stylish and relaxing living environment.

That's why we've developed this collection of premium gas fires and surrounds to complement all tastes and lifestyles.

“I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards.

As a result all Kinder fires carry a 10 year guarantee to reflect my belief in their quality and durability, and our experienced Kinder retailers are hand-picked to give you the very best advice and service.

This brochure has been designed to make the purchase of your new Kinder fire as simple as possible. I hope you will find it both informative and inspiring.”

Richard Jones

BFM Europe
BRITISH FIRE MANUFACTURERS

BRITISH MADE QUALITY

Kinder is crafted by BFM Europe, the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Kinder branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

FIRES FOR LIFE

There is nothing like the immediate warmth and comfort of a Kinder Gas fire

Designed to suit your lifestyle with a combination of appealing looks, outstanding warmth and practical attention to detail - Kinder designs gas fires for all tastes, from traditional to contemporary, and including many models available as powerflue and balanced flue options.

Eden HE trimless
white stones
PAGE 34

All our fires feature a Flame Supervision Device (FSD) and all conventional flue models feature an Oxygen Depletion Sensor (ODS) for maximum safety. The ODS is a device which shuts off the gas supply to the main burner in the unlikely event of a fault. The FSD is a device which detects the presence of a flame, and in the absence of that flame, prevents uncontrolled release of gas to the burner.

Kinder products are stocked by leading independent fire specialists located throughout the UK. These retailers are fully trained to make the choice and subsequent installation of your Kinder fire as seamless as possible. By dialing 0800 040 7959 you will be connected directly to your nearest Kinder stockist.

Alternatively you may prefer to visit our website at www.gas-fires.co.uk

Everything you need to know about gas fires, from alternative power supplies to flue types is on the following pages, so you can sit back and relax with Kinder from the start.

Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI) to meet the most up to date standards for performance, safety and efficiency.

Camber HE
PAGE 22

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are

recognised internationally for their technical expertise, quality services and in-depth knowledge of gas, electrical, oil and solid fuel product testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

Kinder 10 year† and lifetime guarantees

We understand that your gas fire is going to be the heart of your home. That's why we are passionate about ensuring our gas fires offer the ultimate in build quality and looks.

Eden HE with designer trim and logs
PAGE 34

From the beginning, our Design Team sets the standard by creating new and innovative products, so you'll find exactly the fire you have in mind. Then there's our Development Team. They consistently deliver higher safety and efficiency ratings to give you total confidence.

Before we commence manufacture, all models are assessed and approved by leading independent organisations and each fire rigorously checked by our Quality Control Department prior to leaving our state-of-the-art facility.

All in all, guaranteeing that when you settle down in front of a Kinder fire, you'll have the very best in gas fire technology behind it.

Every Kinder gas fire carries a 10 Year Comprehensive Guarantee† providing you with reassurance and peace of mind. This means that your fire is guaranteed for ten years against manufacturing and material defects, including parts and labour.

There is also an Extended Lifetime Guarantee which covers all functional parts of the gas fire, excluding electronic components and labour costs. Both guarantees are subject to our 'Conditions of guarantee' including annual service and annual replacement of the oxy-pilot assembly.

We offer these guarantees, unlike other manufacturers, as a sign of our commitment to

the highest standards of build quality, ensuring that life will revolve around your Kinder fire for many years to come. In-line with gas industry practice, we recommend that all gas appliances should be serviced annually by a Gas Safe Register engineer to ensure continued safe operation and optimum performance throughout the lifetime of the product. Gas Safe Register engineers are available directly through our Service Department.

† This exclusive 10 year guarantee is only applicable to products purchased from within an approved Kinder showroom. Any product purchased via an online retail store will only be eligible for a 3 year guarantee.

Before you begin

There is a Kinder fire for all tastes, from traditional to contemporary chic. However, before you make your final selection, please take time to consider the following:

Radiant or Convector?

A **radiant fire** emanates heat from the combustion chamber only, which is why Kinder radiant fires incorporate a glowing back panel to maximise heat output. A **convector fire** has the added benefit of a heat exchanger attached to the back of the fire. This draws cool air in and sends it back out into the room as hot air, maximising heat output whilst keeping your fuel bills down.

Power

Your gas supply will either be Natural Gas or LPG, depending on the area in which you live.

Natural Gas - The most common gas supply.

LPG - Alternative for houses with no Natural Gas supply.

Chimney or Flue

Your choice of fire will be dictated by the type of chimney or flue you have. If you're not sure, then take a look at your roof and cross-reference it with the simple guide on the right. It is also worth noting that a slimline fire will fit virtually any chimney or flue, whereas a full-depth often requires a traditional chimney or rebate on the fire surround.

Please confirm your flue type by consulting your Kinder Stockist before purchase.

Brick Chimney

A conventional brick chimney is recognisable by a chimney stack with a terracotta pot or gas terminal.

Pre-Fabricated Flue

This is an interlocking metal flue tube system identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Built from concrete or clay blocks, pre-cast flues provide a rectangular section flue. They can be identified by a ridge vent or metal flue tube and terminal on the roof. All fires featuring this icon are suitable for pre-cast flues conforming to BS EN 1858.

No Chimney or Flue

Some properties have no chimney or flue, in which case a balanced flue or powerflue is required.

Powerflue fires expel the flue gases directly outside the building through the use of an electronically driven fan unit mounted on the external wall. A sophisticated microprocessor monitors performance and automatically shuts off the fire in the unlikely event of operation failure.

Balanced flue fires vent directly outside through a horizontal co-axial pipe (one pipe within a larger pipe). The outer pipe draws air in from the outside and the inner pipe expels combustion gases. An electricity supply is not required for these products.

Controls

Gas is wonderfully controllable, but which type of control suits you best? The discretion of manual ignition, concealed behind the removable ash pan... the convenience of slide control...or the luxury and style of remote control?

Manual Control

Simple and discreet. The control system is located behind the fire's fret or trim. Once the fire is lit rotate the control knob to adjust the flame height and heat output.

Slide Control

A convenient control system which is located on the top right-hand side of the fire. Push and hold the lever down to ignite and move it up and down to adjust the flame height and heat output.

Semi Remote Control

Light the fire using the manual control system located behind the fire's trim or fret then use the remote control handset to adjust the flame height and heat output.

Fully Automatic Easy Flame Control

Discreet, easy access buttons are used to ignite the fire and adjust heat and flame height.

Fully Remote with Thermostat

The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

Fully Remote Control

The remote control handset is used to light the fire as well as to adjust the flame height and heat output.

Touchlight

Control via two switches, On/Off & High/Low.

Fire Back Panel

Kinder offers a range of fire back panels chosen to compliment each individual fire. In some cases you may be offered a choice of back panel – look out for the symbols on the right.

Proclaim HE Page 30

This type of high efficiency fire has a glass panel across the front of the fire which radiates the heat generated from the fuel bed directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, this makes glass fronted HE's the most efficient conventional flue fires available.

Open fronted HE fires

78%
net efficiency

Oasis Plus Page 16

Open fronted HE fires provide the look and feel of a real open fire with net efficiencies of up to 74%. This type of fire provides both radiant and convected heat. Radiant heat is emitted from the coal effect fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air through the gap above the canopy.

Nevada Plus Page 10 Camber Plus Page 14

Balanced Flue HE fires

94%
net efficiency

Revolution Page 36

Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home. A balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes. The radiant heat generated from the fuel-bed combines with convected heat, which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, making balanced flues one of the most efficient types of gas fires available.

Revolution Balanced Flue

high efficiency

Designed to fit into a standard cavity wall with a 3" rebated surround the Revolution Balanced Flue gas fire boasts net efficiency of up to 94% and features a full depth coal fuel effect.

94% net efficiency

The Revolution is available in manual, remote or with a fully automatic Easy Flame control option with discreet, easy access buttons which ignites the fire and allows you to adjust the heat and flame height to suit your needs.

This glass fronted fire has an exceptionally large viewing area and can be styled with a variety of trims and frets available from the Kinder accessories range on pages 54-55.

Limours Balanced Flue

high efficiency

The Limours is Kinder's first dedicated wall mounted balanced flue fire. No chimney is required as this fire is flued directly through an outside wall. It can be simply hung on the wall with no need for any extensive building work or recessed when fitted with an additional wall plate.

87% net efficiency

The Limours is operated via a semi automatic remote control and features a contemporary graphite fascia with stainless steel detail and an aggregate stone effect fuel bed.

Powerflue installation possibilities

Examples of powerflue installations

An example of a standard powerflue installation. The gas fire is flued directly through an outside wall via a straight, horizontal length of flue.

An example of a powerflue installation using three bends.

An example of a powerflue installation using a vertical section of flue pipe and two bends.

Kinder powerflue fires

A gas fire creates a welcoming heart to any living room but many newer homes are being built without a chimney or flue so a conventional gas fire is not an option.

However, powerflue (PF) gas fires have been specifically designed for homes without a conventional flue system providing a gas fuelled alternative heat source to an electric fire or radiator. Several of the models in the Kinder range are available as a powerflue model including the Black Magic, Camber, Kalahari and the Nevada.

The Kinder Slimline Fan System fully recessed into an outside wall leaving only a discreet 3" projection. 96mm and 183mm spacers are available if required.

Kalahari MC PF, Camber MC PF and Black Magic MC PF

Please note, if required, more detailed information regarding technical specification is available from your Kinder stockist.

Fire Surrounds

Quality & choice as standard

Kinder Fire Surround Suites have been designed to impress, with the emphasis firmly on clean lines. This range of traditional and contemporary designs is manufactured in luxurious Portuguese Limestone.

Genoa - page 47

Venice

Leon - page 55

Surrounds Dimensions

	A	B	C	D	E	F	G	H	I
Genoa	1350mm	1115mm	425mm	565mm	1370mm	200mm	75mm	380mm	55mm
Leon	1370mm	1070mm	425mm	565mm	1370mm	200mm	75mm	400mm	50mm
Venice	1340mm	1075mm	425mm	565mm	1370mm	180mm	75mm	380mm	55mm

Portuguese Limestone

Portuguese Limestone is a natural product and as such can be subject to variation in colour and veining. Small fossils and crystal lines may also be apparent in some sections of limestone making it an inherent feature of the product. These are not defects but mean that every suite will be entirely unique.

It is normally a requirement that all Limestone products be cleaned and sealed using Lithofin Power-Clean and Stain-Stop, or equivalent products, after installation. However, all Limestone products supplied by Kinder are pre-sealed to limit any marks which may be left on the product due to installation and further sealing should not be required.

When you receive your new surround there may be some colour variations. This is typical of Portuguese Limestone as the stone is a particularly porous material which absorbs moisture during manufacture and deep sea transport in the container. After 2-3 weeks in a room with an average temperature the surround will dry to a consistent colour.

IMPORTANT NOTICE

WARNING BFM Europe Limited is a Gas Safe Register company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase.

Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information.

Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types.

We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure.

We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat.

In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.
