

AMERIPOLISH Polished Concrete Dyes

All dyes are
EARTH FRIENDLY

Create a **bold** impression...

AMERIPOLISH is a **translucent dye** that is formulated using extremely fine molecules of color **designed to penetrate and color any cementitious surface** (All bond barriers must be removed prior to application of dye). AmeriPolish Dye was created for use with polished concrete, but can be used as a base color or touch up for concrete that has received integral color, dry shake hardeners, acid stains or even as a highlight.

NOW AVAILABLE In Both Solvent & Water-Based

Our **WATER-BASED Dye** offers the same 22 colors as the original Solvent-Based dye with just as much vibrancy. Key markets are for projects where air flow cannot be safely controlled, where electrical spark or flames are present, and where your project involves working around fresh meat, vegetables and fruit.

EDGETINT is a mixture of AmeriPolish dye and our proprietary acrylic blend that allows you to apply color that is complementary or contrasting to your field color, at edges, footings and hard to reach areas, or areas where you are unable to grind or polish. As with any sealer application, it is recommended that you apply a wax coat if the work is in a traffic area.

**Long Lasting.
Color.**

COLOR Chart

These color samples are only a representation of the AmeriPolish Dye colors. Change in concrete slab colors will effect the appearance of the dye. Color results cannot be guaranteed, actual colors may vary.
