About Advanced Retail

Advanced Retail have been in the business of Retail Business systems for over 25 years. We target the medium sized enterprise and have a number of blue chip customers.

We aim to provide software and services that are responsive to our customer's needs and to their ever changing requirements. In a market with a lot of small players and some very large players we are looking to fill the gap in the middle where customers need a modern product that can be agile at accommodating industry changes.

We work as a modern distributed company with many of us working from home. All employees are expected to use our online collaborative tools to build company/team ethic even when we are physically miles apart. My aim is that Advanced Retails should be a forward thinking and progressive employer. Working for us should be rewarding and enjoyable.

Our Products

Our product line includes

- EPoS system written in Winforms with SQLite and WCF
- Tablet based EPoS system (work in progress)
- Retail Back Office suite written in ASP.NET
- Two .NET CF applications for retail mobile devices
- WCF based system for interfacing with third party systems
- Many custom modules/application/utilities
- HTML5 Graphing/Reporting module

Technologies

We work almost solely with Microsoft technologies.

All compiled code is .NET/C#.

We use:
ASP.NET
Winforms (Desktop and CompactFramework)
WCF
JQuery
Telerik Reporting
.NET Windows Services
SVN Source Control

The majority of data storage is SQLServer, with use of SQLite on tills and mobile devices. Our applications are data driven so you must be confident using large data bases (often many millions of rows). All interaction with data is via stored procedures.

The Role

The role of Senior Developer will report to David Billingham (Managing and Technical Director).

The role is to assist in all areas of product development from creating new products to the maintenance and on gong development of existing products.

You will be expected to keep up to date with new technologies and methodologies and to work with me on when/how/if to bring these into the code base to keep the products up to date.

You will be expected to provide both direction and collaboration in evolving our product range. Your input will be important in the future technical direction of the business

You may be asked to liaise directly with customers on requirements and produce requirement specifications for your own work and for others.

You will work closely with our testing\QA role to ensure that all software is production ready.

We work in a fast moving environment so you must be able to work flexibly and efficiently.

As well as a competitive salary, for the right candidate, we will offer a directorship and share options.
